NSR/FOP Evaluation Document

Preliminary Determination/Decision - Statement of Basis

for

Modification to

FOP Number: 223900003

For:

CalPortland Company

Facility:

CalPortland – Oro Grande

Facility Address:

19409 National Trails Highway
Oro Grande, CA 92368

Document Date: January 19, 2018
Submittal date to EPA/CARB for review: January 19, 2018
EPA/CARB 45-day Commenting Period ends: March 5, 2018
Public Notice Posted: January 25, 2018
Public Commenting Period ends: February 24, 2018
Permit Issue date: On or about March 19, 2018

Permitting Engineer:
Chris Anderson

14306 PARK AVENUE, VICTORVILLE, CALIFORNIA 92392
PHONE: (760) 245-1661 • FAX: (760) 245-2022 • EMAIL: PERMITTING@MDAQMD.CA.GOV

A. Introduction

1. Application and Setting

CalPortland Company, Oro Grande Cement Plant (CalPortland), Federal Operating Permit (FOP) number 22390003, located at 19409 National Trails Hwy, Oro Grande, CA 92368 is a modern Portland cement manufacturing facility. The basic process of the facility is the calcining of limestone, which is mixed with other raw materials. Calcining takes place in a pre-calciner and the rotary kiln. Ancillary processes are the cooling of the clinker, milling, blending, crushing, and packaging and/or dispatch in bulk truck and railcar.

The Mojave Desert Air Quality Management District (MDAQMD or District) received an application for the proposed "Cardinal Scale" Truck Loadout Project (August 15, 2017). The project consists of;

- Installation of an additional cement truck loadout point ("Cardinal Scale" Loadout) adjacent to existing cement truck loadout point, Loading Station 4 (District Permit B000161).

A copy of this application material can be viewed in Appendix A.

Additionally, the District received a request to change the frequency of the kiln and finish mill baghouse bag and suspension system inspection from quarterly to annually as fulfilling this requirement quarterly can be a burden on facility operations. For the Districts review and decision pertaining to this proposal, please see section C(1) below.

Pursuant to District Rule 1301 – *New Source Review Definitions*, CalPortland is an existing Major Facility for CO, NO_x, SO_2, $PM_{10/2.5}$, and VOC. The MDAQMD is classified as 'attainment/unclassified' by USEPA and CARB for CO, SO_2, and $PM_{2.5}$; therefore, pursuant to District Rule 1303 – *New Source Review Requirements*, the proposed equipment is subject to both BACT and Offset requirements for the Nonattainment Air Pollutant/Precursors of PM_{10} (as only particulate matter emissions are emitted).The proposed project will utilize emission reduction credits to offset any increase in the facility's Potential Emissions. Subsequently, a NSR analysis is required for this modification.

In addition, CalPortland is defined as a federal Major Facility pursuant to District Rule 1201 – *Federal Operating Permit Definitions.* The proposed modifications classifies as a Significant Modification to CalPortland's Federal Operating Permit (FOP). Pursuant to District Rule 1205 – *Modifications of Federal Operating Permits*, section (B)(2) and District Rule 1302(D)(1)(d), this document serves as the preliminary decision and Statement of Legal and Factual Basis.

2. Description of Project

CalPortland proposes to install an additional cement truck load-out point (Cardinal Scale Loadout) adjacent to the existing load-out point Truck Loading Station 4. The proposed load-out point will be adjacent to the existing load-out point and will facilitate truck loadout by, 1) enabling trucks to load two (2) types of cement in this area

simultaneously, and 2) expediting truck load-out, as two trucks will be able to loadout, simultaneously. This proposed change will require that one of the four (4) silos currently feeding Truck Loading Station 4 (Silo #21) be diverted to feed the proposed Cardinal Scale Loadout. In addition, the vent tube from Cement Silo #21 to baghouse (611BF040) will be severed and, instead, a new baghouse (611BF041) will be installed on Cement Silo #21. From Cement Silo #21, cement products will be transferred via three (3) enclosed pneumatic air slides to two (2) load-out spouts (613LS301 & 613LS302), each of which is equipped with a dual axis spout positioner (613BK301 & 316BK302). The two (2) spouts are positioned to load both of a truck's trailer bins simultaneously, not to load two entirely separate trucks simultaneously. Both of the spout positioning systems will be equipped with baghouse filters (613BF301 & 613BF302). As the entire system from the silo to the spouts is enclosed and air tight, any dust emissions generated in these sources is routed to these baghouses.

B. Analysis

1. Determination of Emissions

Table 1 presents the project emission analysis (maximum potential to emit) for the project.

Due to the general nature of this facility's permit operations, all emissions emitted by a production process are vented to atmosphere through an air pollution control device (baghouse). The District conservatively calculates the potential to emit for a baghouse as follows;

Emission Rate (gr/scf) x Fan Size SCFM (cu ft/min) x Hours of Operation per Year x 60/7000* = Emissions (lbs/year)
*Conversion Factors- minutes to hours and grains to pounds.

Therefore, the potential to emit for each controlled permit operation is established by the emissions venting to atmosphere through the baghouse, not the capacity nor production rate. It should be noted that the overall production of the facility is dictated by clinker production limits for the kiln.

Again, there are no emissions of NO_X, VOC, SO_X, or CO associated with the installation of this equipment. About 40% of all PM emitted is considered PM_{10}, and about 6% of all PM is considered $PM_{2.5}$ emissions for purposes of this project[1]. Maximum annual criteria emissions are calculated assuming maximum permitted activity. Total annual emissions of PM_{10} will not exceed 7884 pounds or 3.94 tons per year. Detailed emissions calculations are provided in Appendix C.

District Rule 1304 – *Emissions Calculations*, provides the procedures and formulas to calculate emission changes.

[1] PM Size and Chemical Speciation Profile for Concrete Batching – PM3431, Wenli Yang, ARB.

Pursuant to District Rule 1304, the Emission Change for a new or modified Facility or Emissions Unit(s) shall be calculated, by subtracting Historic Actual Emission from Proposed Emissions (section (B)(1)(a)):

Emissions Change = (Proposed Emissions) – (Historic Actual Emissions)

Table 1 - Project Emissions Analysis				PM_{10}	
Emissions Unit	**Control Device**	**Control Device Permit #**	**Control Device ID**	**HAE (ppy)**	**Emissions from Proposed Unit (ppy)**
Cement Silo 21	Cement Silo 21 Baghouse	C012923	611BF041	0	5631
South Loadout Spout	South Loadout Spout Baghouse	C012927	613BF301	0	1126
North Loadout Spout	North Loadout Spout Baghouse	C012928	613BF302	0	1126
Total Proposed Emissions				-	7884
Total HAE				0	
Emissions Increase				7884	
Offsets Needed				Yes	
Offset Ratio				1.0:1.0	
Amount of PM10 Emission Offsets Required				7884	

2. Determination of Nonattainment NSR Requirements

a. BACT Evaluation

[District Rule 1302(C)(2)(a)]

Best Available Control Technology (BACT) is required for each Nonattainment Air Pollutant or its Precursors with potential to emit (PTE);

a) new or modified permit unit; 25 pounds per day or more
b) new or modified facility; 25 tons per year or more.

[District Rule 1303(A)]

Because this facility has a PM_{10} PTE greater than 25 tons per year or more, BACT is required for each new permit unit. BACT is defined as the most stringent emission limit or control technique which has been achieved in practice, for such Permit Unit class or category of source [District Rule 1301].

The proposed new cement loadout system must be equipped with BACT for only PM_{10} as no other Nonattainment Air Pollutant or its Precursors are emitted.

PM_{10} BACT

Dry Material (Cement) Handling at a Cement Manufacturing Facility

The applicant proposes that each dry material storage and transfer point or pneumatic conveyance system vent only to atmosphere through a fabric filter baghouse or bin vent with a PM_{10} emission rate not to exceed 0.005 grains/dscf.

Baghouse Achievable Emission Limits/Reductions

Based on a review of the available BACT determinations for this class and category of source, the District determines BACT as, enclosure of all material storage and transfer points and vent to baghouse(s) with 0.005 gr/dscf as BACT.

b. Offsets Evaluation
[District Rule 1302(C)(3)]

Offsets are required for any new or modified Facility which has the Potential to Emit a Regulated Air Pollutant in an amount greater than or equal to the thresholds for the Nonattainment Air Pollutants and their Precursors specified in District Rule 1303 (B)(1). As noted above, PM_{10} Offsets are required for this project as the facility PTE PM_{10} emissions exceeds the District Offset threshold, which is 15 tons per year. The applicable PM_{10} offset ratio specified by District Rule 1305(C) for the project is 1.0 to 1.0.

CalPortland proposes the use of PM_{10} emission reduction credits from ERC Certificate No. 0104 to offset the project PM_{10} Proposed Emissions. In accordance with District Rule 1305, the District has identified that there are no RACT reductions associated with these credits, therefore the full ERC amounts described in Table 2 below are available for use for this project. The remaining balance of credits will be issued in accordance with District Rule 1302 following completion of the project.

Table 2 – Emission Reduction Credits, Pounds Per Year

	Cert #	Owner	Certificate Date	PM10	NOx	VOC	CO	SOx
Available	0104	CalPortland	1/20/2016	22074	1484	12	5849	0
Proposed for Offsets	0104	CalPortland	1/20/2016	-7884	0	0	0	0
Balance	TBD	CalPortland	TBD	14190	1484	12	5489	0

c. Determination of Additional Federal Requirements
[District Rule 1302(C)(4)]

Pursuant to the requirements in District Rule 1302 B(1)(a)(ii), an analysis of Alternative Siting is not required as the proposed equipment is not a Major Modification as defined in District Rule 1301 (DDD).

Pursuant to the requirements in District Rule 1302 B(1)(a)(iii), an analysis of any anticipated impacts on visibility is not required as the proposed equipment does not qualify as an application for a new Major Facility, nor is it a Major Modification for NSR purposes.

3. Determination of Requirements for Toxic Air Contaminants

[District Rule 1302(C)(5)]

a. *District Rule 1320:*

Pursuant to District Rule 1320 – *New Source Review for Toxic Air Contaminants*, CalPortland is subject to both State and Federal Toxic New Source Review, as CalPortland is a New or Modified Facility (or Emissions Units) which has the potential to emit a Toxic Air Contaminant, and CalPortland also has the potential to emit 10 tons per year of any single Hazardous Air Pollutant (Federal T-NSR). Pursuant to the requirements of District Rule 1320, an applicability analysis of state and federal air toxic regulations was conducted for the proposed equipment (State T-NSR and Federal T-NSR, respectively). The State T-NSR and Federal T-NSR analyses are described below:

1. State T-NSR:

Section (E)(1)(b) of District Rule 1320 requires that if any ATCM applies to the proposed equipment, the requirements of that ATCM shall be added to the District permit. An ATCM does not apply to the proposed Emission Units (EU).

Pursuant to District Rule 1320, section (E)(2), State T-NSR also requires an EU Prioritization Score (PS). A Prioritization Score (PS) considers potency, toxicity and amount of toxics released into the air, as well as the distance to workers, residents and sensitive receptors (such as hospitals, schools, and day care centers). Section (E)(2) requires PS to be calculated utilizing the most recently approved CAPCOA Facility Prioritization Guidelines, the most recently approved OEHHA Unit Risk Factor for cancer potency factors, and the most recently approved OEHHA Reference Exposure Levels for non-cancer acute factors, and non-cancer chronic factors. The District prepared the EU PS using the July 2016 CAPCOA Facility Prioritization Guidelines in accordance with the Dispersion Adjustment Procedures and the recent CalPortland 2016 emission inventory data for Cement Silos 21-24 and Truck Loadout. The EU PS for Cement Silo 21 and Cardinal Scale Loadout, is as follows:

Proposed New/Modified Emission Units	Cancer Priority	Acute Noncancer Priority	Chronic Noncancer Priority
Cement Storage Silo 21	7.64	0.020	0.18
Cardinal Scale Truck Loadout	2.47	0.0066	0.058

*Distance from application, verified using google earth. From proposed truck loadout to nearest receptor (residence) is 187 meters.

As shown in the table above, the PS for each of the proposed new units are greater than 1 and less than 10; therefore, each unit is categorized as "Intermediate Priority." Pursuant to District Rule 1320, section (E)(2)(b), no further State T-NSR action is required.

2. Federal T-NSR:
Pursuant to section (F)(1) of District Rule 1320, the Modified Facility/EU were analyzed to determine if any current, enforceable Maximum Achievable Control Technology (MACT) standards apply. The proposed equipment is subject to the Portland Cement MACT (40 CFR 63, Subpart LLL) and will comply with all applicable requirements for these units by permit condition. There are no other applicable MACT standards. Federal T-NSR is satisfied.

b. District Rule 1520 – Control of Toxic Air Contaminants from Existing Sources applies to CalPortland, as they are an existing facility that has a facility PTE greater than ten (10) tons per year for VOC, PM, and NO_X, as well as a PTE to emit a TAC (Section (B)(1)(a) and (c)). CalPortland's 2009 Comprehensive Emission Inventory Report (CEIR) was utilized to fulfill the requirements of section (D)(1)(b)(i) of District Rule 1520 as the 2009 CEIR emissions data is representative of current operations and was previously analyzed in accordance with Section (E) of District Rule 1320, concluding with an approved Health Risk Assessment (HRA) result. The modification of the Cement Silo 21 and addition of Cardinal Scale Truck Loadout will not cause an increase in Significant Health Risk as there is no substantial increase in toxic emissions.

The numerical results of the 2009 HRA are listed below. The results indicate that CalPortland facility is not a Significant Health Risk for maximum lifetime cancer risk, however exceed the Significant Health Risk thresholds for chronic and acute total hazard index. Based on this exceedance CalPortland conducts quadrennial public notification in accordance with Section (F) of District Rule 1520 and submits annual CEIR updates.

	Cancer Risk, per million (1)	Chronic THI (2)	Acute THI (3)
Facility HRA Result	**7**	**1.52**	**1.43**

1. This column reports the maximum lifetime excess cancer risk estimate at an occupational or residential receptor (whichever is greater) approved by the District. The maximum estimated risk generally is possible at only one location. All other locations show lower risks. This estimate assumes that a person resides at the location of maximum impact 24 hours per day, 365 days per year, for 70 years of exposure or a person works at the location of maximum impact 8 hours per day, 245 days per year, for 40 years of exposure. Actual cancer risk will likely be less.
2. Chronic total health hazard index (THI) is the sum of the ratios of the average annual exposure level of each compound to the compound's reference exposure level (REL). Actual chronic THI will likely be less.
3. Acute THI is the sum of the ratios of the maximum one-hour exposure level of each compound to the compound's REL. Actual acute THI will likely be less

4. Determination of Requirements for Prevention of Significant Deterioration
[District Rule 1302(C)(6)]

a. PSD Analysis

The federal PSD regulations are provided in 40 CFR 52.21. Per 40 CFR 52.21(a)(2), these regulations apply to any new major stationary source or any existing major stationary source where a project results in a significant net emissions increase located in an unclassifiable or attainment area. The Facility is an existing major PSD stationary source. The PSD regulations only apply to attainment or unclassifiable pollutants which, for this Facility, are PM, PM2.5,

NO2, SO2, CO, and Pb. As such, CalPortland must evaluate if the emission increases associated with the Cardinal Scale project are significant. This project is expected to emit PM and PM2.5, but no other PSD pollutants.

For PSD applicability purposes, the Cardinal Scale Loadout project is considered a stand-alone project and not affiliated with (a) the Modernization project which was permitted by MDAQMD under a separate permitting action in 1999 or (b) the new truck load out system project which was included in a November 2017 ATC application submitted to MDAQMD. It should be noted that even if the Cardinal Scale Loadout project and the new truck load out system project were considered as a single project due to the short period of time between the permit application submittals, the total PTE of PM and PM2.5 for both projects would not exceed the 25 tpy PM and 10 tpy PM2.5 significant emission rates (SER).

The PTE of the Cardinal Scale project for PM is 9.86 tons per year and for PM2.5 is 0.59 tons per year. Per 40 CFR 52.21(b)(23)(i), the SER is 25 tpy for PM and 10 tpy for PM2.5. Because the PM/PM2.5 PTE for the Cardinal Scale Loadout Project is below the PM/PM2.5 SER, this project is not considered significant. As such, the requirements of 40 CFR 52.21 do not apply to the Cardinal Scale project.

b. NAAQS Impact Analysis

District Rule 1302, section (D)(5)(b)(iv) requires that any new or Modified Facility located in an area classified by USEPA as attainment or unclassifiable shall determine if the Facility will cause or contribute to a violation of the National Ambient Air Quality Standards (NAAQS). The proposed modification, discussed herein, through implementation of BACT, will not contribute to a violation of the NAAQS.

5. Rules and Regulations Applicable to the Proposed Project

District Rules

Rule 201/203 – *Permits to Construct/Permit to Operate*. Any equipment which may cause the issuance of air contaminants must obtain authorization for such construction from the Air Pollution Control Officer. CalPortland is in compliance with this rule as they appropriately applied for a District permit for all new equipment and maintains District permits for all residing equipment.

Rule 204 – *Permit Conditions*. To assure compliance with all applicable regulations, the Air Pollution Control Officer (Executive Director) may impose written conditions on any permit. The District has imposed permit conditions to ensure CalPortland complies with all applicable regulations.

Rule 206 – *Posting of Permit to Operate*. Equipment shall not operate unless the entire permit is affixed upon the equipment or kept at a location for which it is issued and will be made available to the District upon request.

Rule 207 – *Altering or Falsifying of Permit.* A person shall not willfully deface, alter, forge, or falsify any issued permit.

Rule 209 – *Transfer and Voiding of Permits*. CalPortland shall not transfer, whether by operation of law or otherwise, either from one location to another, from one piece of equipment to another, or from one person to another. When equipment which has been granted a permit is altered, changes location, or no longer will be operated, the permit shall become void.

Rule 210 – *Applications*. CalPortland provided all the required information to correctly address the proposed equipment pursuant to this rule, although there were instances in which additional information were required, in which the thirty (30) day clock was restarted.

Rule 212 – *Standards for Approving Permits*. This rule establishes baseline criteria for approving permits by the District for certain projects. In accordance with these criteria, the proposed modifications and application does not cause issuance of air contaminants in violation of Sections 41700 or 41701 of the State Health and Safety code.

Rule 221 – *Federal Operating Permit Requirement.* CalPortland is in compliance with this rule, as they currently hold and maintain a Federal Operating Permit.

Rule 301 – *Permit Fees*. The proposed equipment will increase CalPortland's annual permit fees by the applicable amounts described in section (E) of this rule.

Rule 401 – *Visible Emissions*. This rule limits visible emissions opacity to less than 20 percent (or Ringlemann No. 1). In normal operating mode, visible emissions are not expected to exceed 20 percent opacity.

Rule 402 – *Nuisance*. This rule prohibits facility emissions that cause a public nuisance. The proposed modifications and associated equipment is required by permit condition to employ good engineering and operational principles in order to minimize emissions and the possibility of a nuisance.

Rule 408 – *Circumvention*. This rule prohibits hidden or secondary rule violations. The proposed modifications as described is not expected to violate Rule 408.

Rule 430 – *Breakdown Provisions*. Any Breakdown which results in a violation to any rule or regulation as defined by Rule 430 shall be properly addressed pursuant to this rule.

Rule 900 – *Standards of Performance for New Stationary Sources (NSPS)*. Rule 900 adopts all applicable provisions regarding standards of performance for new stationary sources as set forth in 40 CFR 60. 40 CFR 60 Subpart F – Standards of Performance for Portland Cement Plants applies to this facility. This rule limits the allowable opacity from kilns and clinker coolers. It does not apply to the proposed Cardinal Scale Loadout.

Regulation X – *National Emission Standards for Hazardous Air Pollutants*. Pursuant to Regulation X, CalPortland is required to comply with all applicable ATCMs and under state law, a federal National Emission Standards for Hazardous Air Pollutants (NESHAP) becomes the State ATCM, unless the Air Resources Board (ARB) has already adopted an ATCM for the source category and associated hazardous air pollutant(s). In the case of the proposed new and modified equipment, the Portland Cement MACT is the applicable MACT and ATCM (as the state has not adopted an equivalent rule).

Regulation XII – *Title V Permits*
This regulation contains requirements for sources which must have a FOP. CalPortland currently has a FOP and is expected to comply with all applicable rules and regulations.

Rule 1201 – *Federal Operating Permit Definitions.* CalPortland is defined as a federal Major Facility pursuant to this rule.

Rule 1203 – *Federal Operating Permits*. The new baghouse units are subject to New Source Review; is being carried out in accordance with District Rule 1302 procedures which allows for Significant Modifications to be processed concurrent with NSR actions. This procedure conforms with all applicable provisions of District Regulation XII. Further, this permit modification will be noticed similarly to District Rule 1207 requirements and in accordance with District Rule 1302.

Rule 1205 – *Modifications of Federal Operating Permits*. The proposed equipment classifies as a Significant Permit Modification to CalPortland's Federal Operating Permit (FOP), and subsequently, this permit modification is issued in accordance with the provisions of District Rule 1302 pursuant to Rule 1203.

Rule 1207 – *Notice and Comment.* This NSR permitting action is being noticed concurrent with the Significant Modification of CalPortland Federal Operating Permit. Notably, this affords the public the right to petition USEPA to reconsider the decision to not object to the permit action.

Rule 1208 – *Certification*. CalPortland included a Certification of Responsible Official as required with the submitted application for the proposed equipment.

Rule 1211 – *Greenhouse Gas Provisions of Federal Operating Permits*. CalPortland is a Major GHG Facility pursuant to Rule 1211. CalPortland's FOP includes all the requirements of this rule.

Regulation XIII – *New Source Review*
Rule 1302 – *Procedure*. This rule applies to all new or Modified Facilities and requires certain requirements to be fulfilled when submitting an application. All applicable requirements of this rule are discussed in this NSR document as part of the Analysis procedure. Certification of compliance with the Federal Clean Air Act, applicable implementation plans, and all applicable District rules and regulations have been addressed. The Authority to Construct (ATC) application package for the proposed equipment includes sufficient documentation to comply

with Rule 1302(D)(5)(b)(ii). Permit conditions for the proposed project will require compliance with Rule 1302(D)(5)(b)(iii).

Rule 1303 – *Requirements*. This rule requires BACT and offsets for selected facility modifications. Equipment installed shall meet BACT (see Section B(2)(a)). Offsets are necessary to be obtained as the project PTE is demonstrated to be a net increase in emissions. CalPortland will comply with the BACT requirements of District Rule 1303 by accepting a limit of 0.005 grains per dry standard cubic foot for the proposed dust collectors emissions limits. The proposed offset package was analyzed in accordance with Rule 1302 and 1305 and it is determined that the full value of the ERC certificate is valid for use for offsetting this project.

Rule 1304 – *Emissions Calculations*. The Proposed Emissions from the proposed modifications were calculated pursuant to section (B)(1)(a) of this rule.

Rule 1310 – *Federal Major Facilities and Modifications.* The Proposed Emissions from the proposed new units *are not* determined to be a Federal Major Modification as calculated in accordance with Rule 1310(E)(1)(a) as the Projected Actual Emissions, calculated pursuant to section Rule 1310 (E)(3)(c) do not exceed the Federal Major Modification Thresholds. Said calculation methodologies are similar to those required by District Rule 1304(B)(1)(a) considering all things will be equal with regards to startup, shutdown, and malfunction.

Rule 1320 – *New Source Review for Toxic Air Contaminants*. Pursuant to the requirements of District Rule 1302, an applicability analysis of state and federal air toxic regulations was conducted for the proposed modifications (State T-NSR and Federal T-NSR, respectively) and is discussed in further detail in section (B)(3)(a)(1) of this document.

Rule 1520 – *Control of Toxic Air Contaminants from Existing Sources*. This permit action is subject to Rule 1520, as CalPortland is an existing Major Facility and has a facility PTE greater than ten (10) tons per year for CO, NO_x, SO_2, $PM_{10/2.5}$, and VOC, as well as has a PTE to emit a TAC (Section (B)(1)(a) and (c)). A Toxic 'Hot Spots' Program Analysis was previously conducted by the District pursuant to section (E) of District Rule 1520, concluding with production of a HRA. Results of the HRA are discussed in detail in section (B)(3)(b), above.

Regulation XVII – *Prevention of Significant Deterioration*
The purpose of this regulation is to set forth requirements for all new Major PSD Facilities and Major PSD Modifications which emit or have the potential to emit a PSD Air Pollutant pursuant to the requirements of 40 CFR 52.21. The proposed modification does not constitute a new Major PSD Facility or a Major PSD Modification; therefore, PSD does apply to the proposed project.

State Regulations

There are no project specific applicable state regulations.

Federal Regulations

40 CFR 63, Subpart LLL - *National Emission Standards for Hazardous Air Pollutants From the Portland Cement Manufacturing Industry (Portland Cement MACT).* The requirements of this regulation applicable to the proposed equipment are visible emissions (opacity) limits with an initial EPA Method 9 Test and monthly visible emissions observations each subject location. The types of modifications proposed to the existing equipment are not expected to adversely affect compliance as this is a closed system and emission control equipment will continue to be used. Compliance with this regulation is expected and implemented by District permit condition and can be found in CalPortland FOP, Appendix A.

40 CFR 60, Subpart F – *NSPS for Portland Cement Kilns*. This rule limits the allowable opacity from kilns and clinker coolers. It does not apply to the proposed Cardinal Scale Loadout.

40 CFR 64, *Compliance Assurance Monitoring*. The Compliance Assurance Monitoring (CAM) rule (40 CFR 64) applies to each Pollutant Specific Emissions Unit (PSEU) when it is located at a Major Facility that is required to obtain Title V, Part 70 or 71 permit and it meets all of the following criteria. "PSEU" means an emissions unit considered separately with respect to each regulated air pollutant.

> The PSEU must:
> a. Be subject to an emission limitation or standard [40 CFR 64; AND,
> b. Use a control device to achieve compliance [40 CFR 64.2(a)(2)]; AND,
> c. Have the **potential pre-control** emissions that exceed or are equivalent to the major source threshold. [40 CFR 64.2(a)(3)]

A CAM analysis was conducted for the modified silo and new loadout. Maximum potential pre-control emissions do not exceed the major source threshold therefore CAM is not applicable.

The CalPortland facility currently has two PSEU applicable to CAM, Primary and Secondary Crushing. A CAM Plan was approved for these units as part of the 2014 renewal of CalPortland Federal Operating Permit and in accordance with 40 CFR Part 64is subject to review during the next renewal of CalPortland FOP. There are currently no proposed changes to CAM for these units.

6. NSR Preliminary Decision - Conclusion

The District has reviewed the proposed new and modified emission unit applications for CalPortland and conducted a succinct written analysis as required by District Rule 1302, section (D)(1)(b) and District Rule 1203, section (B)(1)(a). The District has determined that the proposed equipment and application are in compliance with all applicable District, state, and federal rules and regulations as proposed and when operated in terms of the permit conditions below.

7. Permit Conditions

The following permit conditions will be placed on the Authorities to Construct (ATC) for the project and in the FOP. All modifications to existing equipment descriptions and permit conditions will be in iterated form. The Statement of Basis follows each permit condition.

EXISTING EQUIPMENT

BULK CEMENT TRUCK LOADOUT NO. 4 – MDAQMD PERMIT # B000161; consisting of:

A drive-through cement bulk truck loadout served by silos 2~~1~~2 through 24, with ancillary equipment:

Equipment No.	Equipment	Capacity	Capac. Units	HP
	Loadout Cone Motor and Spout			1
611BFFN202	Fan for 611BF202	1,650	ACFM	5
613DRY173	Air Dryer Station 4			1
613ASBL210	Air Slide Blower under Silo 22			7.5
613ASBL211	Air Slide Blower under Silo 22			7.5
613CP218	Air Compressor under Silo 22			15

Includes all ancillary equipment associated with this process group, including conveying, storage and material handling. *Note that no new equipment has been added here and the only real change is to remove Silo 21 as all other equipment is existing and changes are for added clarity to the equipment description.*

CONDITIONS:

1. This equipment must not be operated unless it is vented to operating air pollution control equipment covered by valid District permits C001774 (611BF202). [Rule 204; Rule 1303(A)]
The existing bulk truck loadout vents solely through baghouse. There are no operational changes occurring with this modification except that Silo 21 will now vent to new baghouse permit C012927 and C012928 ~~-~~with equal or better emission control. This equipment is expected to continue to operate in accordance with all applicable requirements including Rule 404 and BACT emission limits.

2. The owner/operator (o/o) shall have a continuing program of maintenance/inspections in accord with manufacturer's recommendations and specifications which ensures compliance with District Rules. [Rule 204]
Through implementation of preventative maintenance program this equipment is expected to continuously operate in compliance with applicable rules and regulations including Regulation IV and XIII.

3. The o/o shall maintain a log of all inspections, repairs and maintenance on this equipment and submit it to the District upon request. The log shall be kept for a minimum period of five years. [40 CFR Part 63 subpart LLL; Rule 1303(A); Rule 1203(D)(1)(d)(ii)]
The retention of records enables the facility to demonstrate compliance with all applicable rules and regulations.

(BULK CEMENT TRUCK LOADOUT) BAGHOUSE 611BF202 – MDAQMD PERMIT # C001774; consisting of:

CONDITIONS:

1. The owner/operator (o/o) shall maintain this baghouse in strict accord with those recommendations of the manufacturer/supplier and/or sound engineering principles which produce the minimum emissions of air contaminants. [Rule 204]
Through implementation of preventative maintenance program this equipment is expected to continuously operate in compliance with applicable rules and regulations including Regulation IV and XIII.

2. This baghouse shall be operated concurrently with the cement truck loadout system under B000161. [Rule 204; Rule 1303(A)]
Use of this baghouse at all times ensures this equipment is operating in compliance with all applicable district rules namely that this equipment meets emission limits determined at time of permitting to meet Rule 1303 (BACT).

3. The o/o shall conduct a minimum program of inspection and maintenance on this equipment. The o/o shall maintain current and on-site for five (5) years a log of the following information, which shall be provided to District personnel upon request:
a. Weekly reading of baghouse pressure drop, date and value;
b. Monthly baghouse stack observation date and result (using USEPA Method 22, and USEPA Method 9 if necessary); [40 CFR 63.1350(f)]
c. Quarterly bag and bag suspension system inspection date and results;
d. Date of bag replacements; and,
e. Date and nature of any system repairs. [40 CFR 63.1355(g)]
[40 CFR Part 63 subpart LLL; Rule 1303(A); Rule 1203(D)(1)(d)(ii)]
Through the implementation of a preventative maintenance program, this equipment is expected to continuously operate in compliance with applicable rules and regulations including Rule 401 and Regulation. The retention of records enables the facility to demonstrate compliance with all applicable permit terms, rules, and regulations.

4. This baghouse shall be operated in compliance with applicable requirements of 40 CFR 60 Subpart F – Standards of Performance for Portland Cement Plants and 40 CFR 63 Subpart LLL - National Emission Standard for Hazardous Air Pollutants From the Portland Cement Manufacturing Industry. [40 CFR Part 60 subpart F; 40 CFR Part 63 subpart LLL; Rule 1303(A)]
This condition identifies compliance with the applicable federal regulation is required.

5. This baghouse shall not discharge into the atmosphere an exhaust stream that exhibits greater than ten percent opacity. [40 CFR 63.1345; Rule 401]
This condition ensures equipment meets opacity requirements, validated as necessary by EPA method 9.

6. This baghouse shall discharge no more than 0.14 pounds per hour of PM10 at a maximum concentration of 0.01 grains/dscf at the operating conditions given in the above description. This equipment does not require a regularly scheduled emission compliance test. However, emission compliance testing may be required at the discretion of the District. [Rule 404]
Specifies BACT emission limits.

7. This unit shall be equipped with a device to measure the pressure differential across the bags (manometer). [District Rules 401; 404; and 1303]
The requirement to install, maintain, and operate a pressure differential recording device aides the o/o in establishing and maintaining optimal operating pressures which ensures baghouse is operating efficiently to help achieve Rule 404 and 1303 emission limits as well as avoidance of bag leaks which could lead to visible emissions exceedances (Rule 401).

8. The o/o shall maintain on-site a minimum inventory of replacement bags that assures compliance with these conditions. [District Rules 401; 1303]
This condition helps to ensure that there is minimal upset in process runs and visible emissions due to malfunction of emission control equipment.

SILO-CEMENT AND CEMENT SUPPLEMENT STORAGE (235) – MDAQMD PERMIT # T001753; consisting of:

Equipment No.	Equipment	Capacity	Capac. Units	HP
611SL221	Cement Silo 21	2,600/412	Tons/Gallons	
611SL222	Cement Silo 22	2,800/446	Tons/Gallons	
611SL223	Cement Silo 23	3,000/480	Tons/Gallons	
611SL224	Cement and Fly Ash Silo 24	2,800/446	Tons/Gallons	
611BFFN040	Fan for 611BF040	15,000	ACFM	

Includes all ancillary equipment associated with this process group, including conveying, storage and material handling. Gallons are in thousands.

CONDITIONS:
1. Silo 21 must not be operated unless vented to operating air pollution control equipment covered by valid District permit C012923(611BF041) and Silos 22, 23, and 24 must not be operated unless vented to operating air pollution control equipment covered by valid District permit C007470 (611BF040).
~~Process equipment shall not be operated unless it is vented to its associated control equipment~~.
[Rule 204; Rule 1303(A)]
Use of this baghouse at all times ensures this equipment is operating in compliance with all applicable district rules namely that this equipment meets emission limits determined at time of permitting to meet Rule 1303 (BACT).

BAGHOUSE 611BF040 – MDAQMD PERMIT # C007470; consisting of:
a pulse jet baghouse with polyester felt bags whose total filter area is 2000 square feet, equipped with a 30 hp fan generating 10,000 cfm of flow at 135 degrees Fahrenheit (for an air to cloth ratio of 5.0:1). This unit serves the silos 2~~1~~2 through 24 portion of the cement system (T001753).

CONDITIONS:

1. The owner/operator (o/o) shall maintain this baghouse in strict accord with those recommendations of the manufacturer/supplier and/or sound engineering principles which produce the minimum emissions of air contaminants. [Rule 204]
Through implementation of preventative maintenance program this equipment is expected to continuously operate in compliance with applicable rules and regulations including Regulation IV and XIII.

2. This baghouse shall be operated concurrently with the cement storage system under T001753. [Rule 204; Rule 1303(A)]
Use of this baghouse at all times ensures this equipment is operating in compliance with all applicable district rules namely that this equipment meets emission limits determined at time of permitting to meet Rule 1303 (BACT).

3. The o/o shall conduct a minimum program of inspection and maintenance on this equipment. The o/o shall maintain current and on-site for five (5) years a log of the following information, which shall be provided to District personnel upon request:
a. Weekly reading of baghouse pressure drop, date and value;
b. Monthly baghouse stack observation date and result (using USEPA Method 22, and USEPA Method 9 if necessary); [40 CFR 63.1350(f)]
c. Quarterly bag and bag suspension system inspection date and results;
d. Date of bag replacements; and,
e. Date and nature of any system repairs. [40 CFR 63.1355(g)]
[40 CFR Part 63 subpart LLL; Rule 1303(A); Rule 1203(D)(1)(d)(ii)]
Through the implementation of a preventative maintenance program, this equipment is expected to continuously operate in compliance with applicable rules and regulations including Rule 401 and Regulation. The retention of records enables the facility to demonstrate compliance with all applicable permit terms, rules, and regulations.

4. This baghouse shall be operated in compliance with applicable requirements of 40 CFR 60 Subpart F – Standards of Performance for Portland Cement Plants and 40 CFR 63 Subpart LLL - National Emission Standard for Hazardous Air Pollutants From the Portland Cement Manufacturing Industry. [40 CFR Part 60 subpart F; 40 CFR Part 63 subpart LLL; Rule 1303(A)]
This condition identifies compliance with the applicable federal regulation is required.

5. This baghouse shall not discharge into the atmosphere an exhaust stream that exhibits greater than ten percent opacity. [40 CFR 63.1345; Rule 401]
This condition ensures equipment meets opacity requirements, validated as necessary by EPA method 9.

6. This baghouse shall discharge no more 0.86 pounds per hour at a maximum concentration of 0.01 grains/dscf at the operating conditions given in the above description (BACT). This equipment does not require a regularly scheduled emission compliance test. However, emission compliance testing may be required at the discretion of the District. [Rule 1303(A); Rule 404]
Specifies BACT emission limits.

7. This unit shall be equipped with a device to measure the pressure differential across the bags (manometer). [Rule 1303(A)]
The requirement to install, maintain, and operate a pressure differential recording device aides the o/o in establishing and maintaining optimal operating pressures which ensures baghouse is operating efficiently to help achieve Rule 404 and 1303 emission limits as well as avoidance of bag leaks which could lead to visible emissions exceedances (Rule 401).

8. The o/o shall maintain on-site a minimum inventory of replacement bags that assures compliance with these conditions. [Rule 1303(A)]
This condition helps to ensure that there is minimal upset in process runs and visible emissions due to malfunction of emission control equipment.

PROPOSED NEW EQUIPMENT:

BAGHOUSE 611BF041 – MDAQMD PERMIT # C012923; consisting of:
a Mikropul Model 196(6)-12-20-TR-B pulse jet type baghouse with 196 polyester felt bags (with MikroTex exterior finish- or equivalent), each bag measuring 6" x 12', and whose total filter area is 3,763 square feet, equipped with a TBD hp fan generating 15,000 cfm of flow, for an air to cloth ratio of 3.98:1. This unit serves silo 21 portion of the cement system (T001753).

1. The owner/operator (o/o) shall maintain this baghouse in strict accord with those recommendations of the manufacturer/supplier and/or sound engineering principles which produce the minimum emissions of air contaminants. [Rule 204]
Through implementation of preventative maintenance program this equipment is expected to continuously operate in compliance with applicable rules and regulations including Regulations IV and XIII.

2. This baghouse shall be operated concurrently with Silo 21 of the cement storage system under T001753. [Rule 204; Rule 1303(A)]
Use of this baghouse at all times ensures this equipment is operating in compliance with all applicable district rules namely that this equipment meets emission limits determined at time of permitting to meet Rule 1303 (BACT).
3. The o/o shall conduct a minimum program of inspection and maintenance on this equipment. The o/o shall maintain current and on-site for five (5) years a log of the following information, which shall be provided to District personnel upon request:
a. Weekly reading of baghouse pressure drop, date and value;
b. Monthly baghouse stack observation date and result (using USEPA Method 22, and USEPA Method 9 if necessary); [40 CFR 63.1350(f)]
c. Annual bag and bag suspension system inspection date and results;
d. Date of bag replacements; and,
e. Date and nature of any system repairs. [40 CFR 63.1355(g)]
[40 CFR Part 63 subpart LLL; Rule 1303(A); Rule 1203(D)(1)(d)(ii)]
Through the implementation of a preventative maintenance program, this equipment is expected to continuously operate in compliance with applicable rules and regulations including Rule 401

and Regulation. The retention of records enables the facility to demonstrate compliance with all applicable permit terms, rules, and regulations

4. This baghouse shall be operated in compliance with applicable requirements of 40 CFR 60 Subpart F – Standards of Performance for Portland Cement Plants and 40 CFR 63 Subpart LLL - National Emission Standard for Hazardous Air Pollutants From the Portland Cement Manufacturing Industry. [40 CFR Part 60 subpart F; 40 CFR Part 63 subpart LLL; Rule 1303(A)]
This condition identifies compliance with the applicable federal regulation is required.

5. This baghouse shall not discharge into the atmosphere an exhaust stream that exhibits greater than ten percent opacity. [40 CFR 63.1345; Rule 401]
This condition ensures equipment meets opacity requirements, validated as necessary by EPA method 9.

6. This baghouse shall discharge no more than 0.6 pounds per hour of PM10 at a maximum concentration of 0.005 grains/dscf at the operating conditions given in the above description (BACT). This equipment does not require a regularly scheduled emission compliance test. However, emission compliance testing may be required at the discretion of the District. [Rule 1303(A); Rule 404]
Specifies BACT emission limits. Baghouse is guaranteed to 0.005 gr/dscf by reputable manufacturer and as such initial compliance testing is not required, but may be required later at the discretion of the District.

7. This unit shall be equipped with a device to measure the pressure differential across the bags (manometer). [Rule 1303(A)]
The requirement to install, maintain, and operate a pressure differential recording device aides the o/o in establishing and maintaining optimal operating pressures which ensures baghouse is operating efficiently to help achieve Rule 404 and 1303 emission limits as well as avoidance of bag leaks which could lead to visible emissions exceedances (Rule 401).

8. The o/o shall maintain on-site a minimum inventory of replacement bags that assures compliance with these conditions. [Rule 1303(A)]
This condition helps to ensure that there is minimal upset in process runs and visible emissions due to malfunction of emission control equipment.

BULK CEMENT CARDINAL SCALE TRUCK LOADOUT – MDAQMD PERMIT # B012929; consisting of:

A drive-through cement bulk truck loadout served by silo 21, with ancillary equipment:

Equipment No.	Equipment	Capacity	Capac. Units	HP
	South Loadout Spout (613LS301)			1
	North Loadout Spout (613LS302)			1
	South Loadout Baghouse (613BF301)			15

(3) Pneumatic Air Slide, 613AS30
Dual Axis Spout Positioner 613BK301
Dual Axis Spout Positioner 613BK302

CONDITIONS:
1. This equipment must not be operated unless it is vented to operating air pollution control equipment covered by valid District permits C012927 (613BF301) and C012928 (613BF302). [Rule 204; Rule 1303(A)]
Ensures that emissions generated by this material handling equipment will be sufficiently controlled and operated in accordance with all applicable requirements including Rule 404 and BACT emission limits.

2. The owner/operator (o/o) shall have a continuing program of maintenance/inspections in accord with manufacturer's recommendations and specifications which ensures compliance with District Rules. [Rule 204]
Through implementation of preventative maintenance program this equipment is expected to continuously operate in compliance with applicable rules and regulations including Regulation IV and XIII.

3. The o/o shall maintain a log of all inspections, repairs and maintenance on this equipment and submit it to the District upon request. The log shall be kept for a minimum period of five years. [40 CFR Part 63 subpart LLL; Rule 1303(A); Rule 1203(D)(1)(d)(ii)]
The retention of records enables the facility to demonstrate compliance with all applicable rules and regulations.

4. Prior to commencing operation, the owner/operator shall surrender to the District 7,884 pounds per year of valid PM10 emission reduction credits associated with ERC Certificate #0104.
[District Rule 1302(C)(3)(vi); 1303(B)]

BAGHOUSE 613BF301 – MDAQMD PERMIT # C012927; consisting of:
a DCL CFM-770 pulse jet type dust collector with 14 spun bonded polyester cartridges (or equivalent), each cartridge measuring 8" x 26", and whose total filter area is 770 square feet, equipped with a 15 hp fan generating 3000 cfm of flow, for an air to cloth ratio of 3.8:1. This unit serves the Cardinal Scale Loadout Spout (South) under permit B012929.

1. The owner/operator (o/o) shall maintain this baghouse in strict accord with those recommendations of the manufacturer/supplier and/or sound engineering principles which produce the minimum emissions of air contaminants. [Rule 204]
Through implementation of preventative maintenance program this equipment is expected to continuously operate in compliance with applicable rules and regulations including Regulations IV and XIII.

2. This baghouse shall be operated concurrently with Cardinal Scale Loadout spout (South) under permit B012929. [Rule 204; Rule 1303(A)]
Use of this baghouse at all times ensures this equipment is operating in compliance with all applicable district rules namely that this equipment meets emission limits determined at time of permitting to meet Rule 1303 (BACT).

3. The o/o shall conduct a minimum program of inspection and maintenance on this equipment. The o/o shall maintain current and on-site for five (5) years a log of the following information, which shall be provided to District personnel upon request:
a. Weekly reading of baghouse pressure drop, date and value;
b. Monthly baghouse stack observation date and result (using USEPA Method 22, and USEPA Method 9 if necessary); [40 CFR 63.1350(f)]
c. Annual bag and bag suspension system inspection date and results;
d. Date of bag replacements; and,
e. Date and nature of any system repairs. [40 CFR 63.1355(g)]
[40 CFR Part 63 subpart LLL; Rule 1303(A); Rule 1203(D)(1)(d)(ii)]
Through the implementation of a preventative maintenance program, this equipment is expected to continuously operate in compliance with applicable rules and regulations including Rule 401 and Regulation. The retention of records enables the facility to demonstrate compliance with all applicable permit terms, rules, and regulations

4. This baghouse shall be operated in compliance with applicable requirements of 40 CFR 60 Subpart F – Standards of Performance for Portland Cement Plants and 40 CFR 63 Subpart LLL - National Emission Standard for Hazardous Air Pollutants From the Portland Cement Manufacturing Industry. [40 CFR Part 60 subpart F; 40 CFR Part 63 subpart LLL; Rule 1303(A)]
This condition identifies compliance with the applicable federal regulation is required.

5. This baghouse shall not discharge into the atmosphere an exhaust stream that exhibits greater than ten percent opacity. [40 CFR 63.1345; Rule 401]
This condition ensures equipment meets opacity requirements, validated as necessary by EPA method 9.

6. This baghouse shall discharge no more than 0.13 pounds per hour of PM10 at a maximum concentration of 0.005 grains/dscf at the operating conditions given in the above description (BACT). This equipment does not require a regularly scheduled emission compliance test. However, emission compliance testing may be required at the discretion of the District. [Rule 1303(A); Rule 404]
Specifies BACT emission limits. Baghouse is guaranteed to 0.005 gr/dscf by reputable manufacturer and as such initial compliance testing is not required, but may be required later at the discretion of the District.

7. This unit shall be equipped with a device to measure the pressure differential across the bags (manometer). [Rule 1303(A)]
The requirement to install, maintain, and operate a pressure differential recording device aides the o/o in establishing and maintaining optimal operating pressures which ensures baghouse is

operating efficiently to help achieve Rule 404 and 1303 emission limits as well as avoidance of bag leaks which could lead to visible emissions exceedances (Rule 401).

8. The o/o shall maintain on-site a minimum inventory of replacement bags that assures compliance with these conditions. [Rule 1303(A)]
This condition helps to ensure that there is minimal upset in process runs and visible emissions due to malfunction of emission control equipment.

BAGHOUSE 613BF302 – MDAQMD PERMIT # C012928; consisting of:
a DCL CFM-770 pulse jet type dust collector with 14 spun bonded polyester cartridges (or equivalent), each cartridge measuring 8" x 26", and whose total filter area is 770 square feet, equipped with a 15 hp fan generating 3000 cfm of flow, for an air to cloth ratio of 3.8:1. This unit serves the Cardinal Scale Loadout Spout (North) under permit B012929.

1. The owner/operator (o/o) shall maintain this baghouse in strict accord with those recommendations of the manufacturer/supplier and/or sound engineering principles which produce the minimum emissions of air contaminants. [Rule 204]
Through implementation of preventative maintenance program this equipment is expected to continuously operate in compliance with applicable rules and regulations including Regulations IV and XIII.

2. This baghouse shall be operated concurrently with Cardinal Scale Loadout spout (North) under permit B012929. [Rule 204; Rule 1303(A)]
Use of this baghouse at all times ensures this equipment is operating in compliance with all applicable district rules namely that this equipment meets emission limits determined at time of permitting to meet Rule 1303 (BACT).

3. The o/o shall conduct a minimum program of inspection and maintenance on this equipment. The o/o shall maintain current and on-site for five (5) years a log of the following information, which shall be provided to District personnel upon request:
a. Weekly reading of baghouse pressure drop, date and value;
b. Monthly baghouse stack observation date and result (using USEPA Method 22, and USEPA Method 9 if necessary); [40 CFR 63.1350(f)]
c. Annual bag and bag suspension system inspection date and results;
d. Date of bag replacements; and,
e. Date and nature of any system repairs. [40 CFR 63.1355(g)]
[40 CFR Part 63 subpart LLL; Rule 1303(A); Rule 1203(D)(1)(d)(ii)]
Through the implementation of a preventative maintenance program, this equipment is expected to continuously operate in compliance with applicable rules and regulations including Rule 401 and Regulation. The retention of records enables the facility to demonstrate compliance with all applicable permit terms, rules, and regulations

4. This baghouse shall be operated in compliance with applicable requirements of 40 CFR 60 Subpart F – Standards of Performance for Portland Cement Plants and 40 CFR 63 Subpart LLL - National Emission Standard for Hazardous Air Pollutants From the Portland Cement

Manufacturing Industry. [40 CFR Part 60 subpart F; 40 CFR Part 63 subpart LLL; Rule 1303(A)]
This condition identifies compliance with the applicable federal regulation is required.

5. This baghouse shall not discharge into the atmosphere an exhaust stream that exhibits greater than ten percent opacity. [40 CFR 63.1345; Rule 401]
This condition ensures equipment meets opacity requirements, validated as necessary by EPA method 9.

6. This baghouse shall discharge no more than 0.13 pounds per hour of PM10 at a maximum concentration of 0.005 grains/dscf at the operating conditions given in the above description (BACT). This equipment does not require a regularly scheduled emission compliance test. However, emission compliance testing may be required at the discretion of the District. [Rule 1303(A); Rule 404]
Specifies BACT emission limits. Baghouse is guaranteed to 0.005 gr/dscf by reputable manufacturer and as such initial compliance testing is not required, but may be required later at the discretion of the District.

7. This unit shall be equipped with a device to measure the pressure differential across the bags (manometer). [Rule 1303(A)]
The requirement to install, maintain, and operate a pressure differential recording device aides the o/o in establishing and maintaining optimal operating pressures which ensures baghouse is operating efficiently to help achieve Rule 404 and 1303 emission limits as well as avoidance of bag leaks which could lead to visible emissions exceedances (Rule 401).

8. The o/o shall maintain on-site a minimum inventory of replacement bags that assures compliance with these conditions. [Rule 1303(A)]
This condition helps to ensure that there is minimal upset in process runs and visible emissions due to malfunction of emission control equipment.

C. Title V Permit/FOP – Significant Permit Modification

1. Proposed Changes to FOP

CalPortland submitted an application for Significant Permit Modification in parallel with the application for District Permit modification. The District is processing the proposed FOP changes in accordance with procedures specified in District Rule 1302(D)(1)(d). This preliminary decision also serves as the statement of basis and draft FOP.

The District received a request from CalPortland to change the baghouse bag and bag suspension system inspection frequency from quarterly to annual on all baghouse permits where the kiln or finish mill must be shutdown to perform this inspection. According to CalPortland, fulfilling this requirement on a quarterly basis can be a burden to CalPortland production. In consideration of this change, the District consulted the June 24, 1999 CAPCOA/CARB/EPA Region IX Periodic Monitoring Workgroup Guidelines (CAPCOA Guidelines) and examined all current monitoring requirements placed on baghouse permits proposed for change.

CAPCOA Guidelines state that an annual inspection of the entire baghouse is a sufficient form of monitoring to ensure proper operation. District permits require weekly reading of baghouse pressure drop and monthly baghouse stack observation requirements.

The District determines that an annual baghouse bag and bag suspension system inspection augmented with existing permit requirements will continue to provide a sufficient level of confidence that each baghouse is being properly operated and maintained.

The following is the list of Permit Units affected by this revision;

FOP Condition No.	Equipment ID (Baghouse District Permit No./ Process District Permit No.)
III.33.3.c	341BF102 (C007488/B007445)
III.33.3.c	341BF103 (C007463/B007445)
III.33.3.c	341BF104 (C007487/B007455)
III.33.3.c	351BF510 (C007494/B007445)
III.43.3.c	411BF201 (C012148/T012146)
III.57.3.c	511BF101 (C007415/B007457)
III.75.3.c	531BF102 (C007474/B007471)
III.75.3.c	531BF103 (C007510/B007471)
III.75.3.c	531BF104 (C007469/B007471)
III.75.3.c	531BF200 (C007468/B007471)
III.75.3.c	531BF300 (C007475/B007471)

The proposed changes to the FOP are indicated in the iterated version of the draft FOP dated 1/19/2018.

2. Title V/FOP – Conclusion

The District has reviewed the applications and proposed modifications to CalPortland's Federal Operating Permit. The District has determined that the proposed modification is in compliance

with all applicable District, state, and federal rules and regulations as proposed when operated in the terms of the permit conditions given herein.

D. Comment Period and Notifications

1. Public Comment

This preliminary determination/decision will be publicly noticed on January 25, 2018, allowing for public comment until February 24, 2018. Please see Appendix B for noticing details.

2. Notifications

The preliminary decision was submitted to USEPA and CARB pursuant to District Rule 1302 for a forty-five (45) day review period on January 19, 2018. The final modified FOP shall be issued on or about March 19, 2018.

All correspondence as required by District Rules 1302 were forwarded electronically to the following recipients:

Re: Application for Truck Loadout "Cardinal Scale" Dust Collectors

Dear Mr. Anderson,

CalPortland Company is submitting an application for a new truck scale and loadout area referred to as the "Cardinal Scale" loadout. Enclosed is the application package and checks for the 3 dust collector applications.

If you have any questions, please contact me at (626) 691-1966 or dhaggard@calportland.com.

Sincerely,

Desirea Haggard

Federal Operating Permit #: 223900003
Oro Grande, CA

August 7, 2017

1.0 BACKGROUND

CalPortland Company (CalPortland) operates a cement manufacturing facility at 19409 National Trails Highway in Oro Grande, California 92368 (Facility). The Facility currently has Federal Operating Permit #223900003 (Permit) issued by Mojave Desert Air Quality Management District (MDAQMD) for the existing cement production operations.

This Authority to Construct (ATC) Application Package has been prepared to modify the existing equipment near the Truck Loading Station 4. Specifically, CalPortland wishes to install an additional cement truck load-out point (Cardinal Scale Loadout) adjacent to the existing load-out point Truck Loading Station 4. The proposed load-out point will be adjacent to the existing load-out point, enabling trucks to load two (2) types of cement in this area simultaneously. This proposed change will require that one of the four (4) silos currently feeding Truck Loading Station 4 (Silo #21) be diverted to feed the proposed Cardinal Scale Loadout. In addition, the vent tube from Cement Silo #21 to baghouse 611BF040 will be severed and, instead, a new baghouse (#611BF041) will be installed on Cement Silo #21. From Silo #21, cement products will be transferred via three (3) enclosed pneumatic air slides to two (2) load-out spouts (613LS301 & 613LS302), each of which is equipped with a dual axis spout positioner (613BK301 & 316BK302). The two (2) spouts are positioned to load both of a truck's trailer bins simultaneously, not to load two entirely separate trucks simultaneously. Both of the spout positioning systems will be equipped with baghouse filters (613BF301 & 613BF302). As the entire system from the silo to the spouts is enclosed and air tight, any dust emissions generated in these sources is routed to these baghouses. Please see the attached Process Flow Diagrams for a visual representation of this process as well as an understanding of where the process occurs within the larger plant's process flow.

The proposed Cardinal Scale Loadout will not increase the existing throughput limits at the Facility, but rather allow loading of two (2) cement types/products into the trucks and/or trailers simultaneously. This will reduce haul truck wait times and onsite traffic during busy periods. During a normal day, the same amount of material that would be loaded out to haul trucks without this modification is expected to be loaded out with this modification, only over a shorter duration. Furthermore, the path the material will take with this modification includes the same emissions source path the material would

take without this modification (i.e. a cement silo and a load-out point). Therefore, this modification is expected to have no net effect on Facility Potential to Emit (PTE) emissions. Permitted and unpermitted emissions are expected to remain essentially unchanged (see Section 3.1 for additional discussion of the emissions implications of this Project).

While this application package is being submitted in order to obtain an ATC, this Facility currently operates under Federal Operating Permit #223900003. As such, the next step in the permitting process will be to modify the Federal Operating Permit. Please note that the proposed modification is a Minor Permit Modification per Rule 1201. Additionally, the proposed modification is not considered a Major PSD Modification. Therefore, this action will not require public noticing per Rule 1207 or a separate PSD permit per Rule 1600.

1.1 Facility Information

Applicant:	CalPortland Company
MDAQMD Company #:	2239
Facility Name:	CalPortland Oro Grande Facility
MDAQMD Facility #:	3
Federal Operating Permit ID#:	223900003
Equipment Address:	19409 National Trails Highway Oro Grande, California 92368
Nature of Business:	Cement Manufacturing Facility SIC Code 3241
Facility Contact:	Mrs. Desirea Haggard Environmental Manager P.O. Box 146 Oro Grande, CA 92368 (760) 269-1135 dhaggard@calportland.com
Responsible Official:	Mr. Richard P. Walters Jr. Plant Manager P.O. Box 146 Oro Grande, CA 92368 (760) 269-1183 rwalters@calportland.com
Consultant Contact:	Garrett Zuleger, P.E. Project Manager I - Engineering Sespe Consulting, Inc 374 Poli Street, Suite 200 Ventura, CA 93001 (805) 275-1515
Title V Facility:	Yes

2.0 GENERAL INFORMATION

This Section presents the information required by MDAQMD's "Permit Application Instructions" form.

As this is an ATC application package, MDAQMD's General and Control Equipment Forms are included in Appendix B.

2.1 Equipment / Process Location Drawing

Appendix A contains figures showing the location of the facility and the location of the proposed Cardinal Scale Loadout within the Facility.

2.2 Equipment Description

This section includes a description of the emissions sources and controls that are expected to be permitted.

Baghouse on Cement Silo #21

Common Name:	Pulse Jet Baghouse with Polyester Felt Bags
Manufacturer:	Mikro-Pul Nederman
Model Number:	196(6)-12-20-TR-B
Number of Pieces:	One (1)
Burners / Fuels:	N/A. Attached blower is powered by electricity.
Function:	Emissions (dust) control device.
Dimensions:	196 bags, each 6" x 12'
Maximum Capacity:	15,000 cubic feet of air per minute.
Equipment Details:	See equipment specifications in Appendix D.

Baghouses on Load-Out Spouts (2)

Common Name:	Pulse Jet Baghouses with Polyester Felt Bags
Manufacturer:	Dust Control and Loading Systems, Inc.
Model Number:	CFM-770
Number of Pieces:	Two (2)
Number of Pieces:	Two (2) jet pulse baghouses (#613BF301, #613BF302) connected to the north and south truck load-out collection bins/spouts,
Burners / Fuels:	N/A. Attached 15 hp blowers are powered by electricity.
Function:	Emissions (dust) control device.
Dimensions:	Total filter area = 770 square feet.
Maximum Capacity:	3,000 cubic feet of air per minute each.
Equipment Details:	See equipment specifications in Appendix D.

Load-Out Spouts (2)

Common Name:	Load-Out Spouts
Manufacturer:	DCL Model HPD2x2 Dual Axis, Internally Vented, Spout Positioner
Model Number:	See equipment specifications in Appendix D.
Number of Pieces:	Two (2) load-out spouts (#613LS301, #613LS302) are connected to the two (2) spout positioners (#613BK301, #613BK302) via air-tight connection.
Burners / Fuels:	N/A. The two (2) heavy duty 60:1 worm gear reducers with 1 HP are powered by electricity.
Function:	Load cement into transport trucks.
Dimensions:	Overall height = 27" Horizontal travel = 2' x 2'
Maximum Capacity:	No change in throughputs.
Equipment Details:	See equipment specifications in Appendix D.

2.3 Process Description

The proposed Cardinal Scale Loadout will allow two (2) trucks to load out simultaneously from this portion of the plant where before only one could load out at a time. Cement products are transferred from Cement Silo #21 via three (3) air slides to two (2) load-out spouts, each with a spout positioner. The two (2) proposed load-out spouts transfer the material into both of a haul truck's trailers simultaneously. Cement Silo #21, the air slides, the spouts, and the spout positioners are all enclosed with air-tight connections.

Cement Silo #21 will be equipped with a new baghouse with a 15,000 cfm fan. The two (2) load-out spouts will each be equipped with a baghouse filter that will control any emissions that occur inside the series of connected devices proposed by this Project. These baghouses each have a 15 hp fan that generates 2,800 cfm of flow.

Please see the attached Process Flow Diagram in Appendix A for more detail. In addition, the location of the equipment is shown on the site plan in Appendix A. The manufacturer specifications for the proposed equipment is included in Appendix D

2.4 Equipment Operating Schedule

The proposed truck loading rack will operate on the following schedule:

Parameter	Hours / Day	Days / Weeks	Weeks / Year
Average Schedule	24	6	52
Max Schedule	24	7	52

2.5 Process Weight

The proposed Cardinal Scale Loadout will not increase the existing throughput at the Facility. CalPortland will continue to comply with the current permit throughput limit of 1,600 tons of per hour at the primary crusher. Additionally, longer term throughput will not be changed as a result of this Project.

This additional capacity of the two new spouts will enable the faster loading of trucks during periods of high demand, not increase overall throughput produced/sold.

2.6 Fuels and Burners Used

No fuels or burners will be used to operate the proposed equipment. All of the proposed equipment is powered by electricity.

2.7 Flow Diagram

A simple illustration of the proposed Cardinal Scale Loadout (referred to as the "cardinal scale") process flow is included in Appendix A.

2.8 Drawings of Equipment / Process

Figures are presented in Appendix A.

3.0 PROJECT EMISSIONS

This section addresses the emissions impacts associated with this ATC application.

3.1 Criteria Pollutants

All emissions generated by the proposed equipment will be controlled by one of the three (3) baghouses and will, therefore, exist from one of the (3) three stacks. Particulate matter emissions at each of the stacks will be less than 0.005 grains per dry standard cubic foot (grains/dscf) based on manufacturer specifications. This emissions level was recently identified by CalPortland as the Best Available Control Technology (BACT) standard for new baghouses at this Facility.

This Project does not result in a quantifiable change in Facility emissions because (1) Facility throughput will not change as a result of the Project and (2) the cement that passes through the proposed equipment would pass through the same number and type of emissions sources without the Project. While the proposed baghouses are likely more efficient than the existing baghouses at Truck Loading Station 4 (existing baghouses 611BF040 and 611BF202 both have an emissions limit of 0.01 grains/dscf), this is not sufficient to assign an emissions reduction to the Project. In order to calculate a reduction in Facility emissions due to the new baghouses, the exact amount of cement loaded by Cardinal Scale Loadout would need to be known. Since there is no requirement that a certain amount of the cement pass through the Cardinal Scale Loadout, it is not possible to quantify an emissions reduction. In other words, the Cardinal Scale Loadout may not be used at all on some days, so a reduction in emissions is not certain. For this reasoning, this Project is assumed to produce no change in emissions.

3.2 Air Toxics

While the cement dust generated by the proposed equipment is comprised of some toxic components, the total amount of cement dust emissions produced by the Facility will remain unchanged. Therefore, the proposed equipment will not cause an increase in air toxic emissions and air dispersion/health risk assessment modeling is not included in this application.

3.3 Visible Emissions

All three (3) of the proposed stacks will produce visible emissions of less than 10% opacity.

4.0 MDAQMD RULE COMPLIANCE EVALUATION

This section discusses the potentially applicable MDAQMD rules.

4.1 Regulation II – Permits

The rules in Regulation II that may potentially apply to the Project are:

- ***Rule 201: Permit to Construct***

  This rule requires facilities to obtain written authorization prior to construction of equipment that will emit pollutants. Since this Project requires a small amount of construction, this Authority to Construct (ATC) application has been submitted. Once the ATC is issued, a Federal Operating Permit Modification application will be submitted.

- ***Rule 210: Applications***

  This rule requires a facility to file an application for an ATC. As described for Rule 201 above, this application is for an ATC.

- ***Rule 217: Provisions for Sampling and Testing Facilities***

  This rule requires CalPortland to provide and maintain the necessary platforms, electrical outlets, access and other utilities necessary for the safe sample collections and testing for emissions. CalPortland will ensure that the baghouse stacks are accessible and include the necessary amenities to conduct emissions testing.

- ***Rule 221: Federal Operating Permit Requirement.***

  This rule requires certain Facilities to obtain Federal Operating Permits. The installation of the proposed Cardinal Scale Loadout will require a Federal Operating Permit Modification. Once the ATC is issued, a Federal Operating Permit Modification application will be submitted.

4.2 Regulation III – Fees

The rules in Regulation III that may potentially apply to the Project are:

- ***Rule 301: Permit Fees***

  This rule pertains to the amount, frequency and schedule for payments associated with applications, annual permit fees, engineering analysis of complex sources and others. Per Section (C)(1)(a) of this Rule, the filling fee to be submitted with applications is $269.00. As such, this application includes a check for $269.

- ***Rule 312: Fees for Federal Operating Permits***

  CalPortland has agrees to pay any fees necessary for the Federal Operating Permit. These fees are not meant to be included with this application, though.

4.3 Regulation IV – Prohibitions

The rules in Regulation IV that may potentially apply to the Project are:

- ***Rule 401: Visible Emissions***

  This rule prohibits emissions of air contaminants that exceed a Ringelmann No. 1 (darkness) or of such opacity equal to or greater than a Ringelmann No. 1. CalPortland utilizes the accepted methods of compliance with this rule. These methods include but are not limited to additions of baghouses to particulate emitting sources, water sprays as needed on other particulate sources and watering of haul roads, as well as good combustion techniques (e.g. haul truck idling).

- ***Rule 402: Nuisance***

  This rule pertains to emissions discharged in such quantities to be a bother and nuisance to the public and/or their property. The visible emissions control methods that CalPortland utilizes to comply with Rule 401 preclude violations of this rule.

- ***Rule 403: Fugitive Dust***

  This rule prohibits fugitive dust resulting from activities occurring at the Facility (transport, handling, construction or storage activity) from remaining suspended in the air long enough to cross a property line. The visible emissions control methods that CalPortland utilizes to comply with Rule 401 preclude violations of this rule.

- ***Rule 404: Particulate Matter Concentration***

  This rule limits the concentration of particulate matter based on the flow rate of discharge from the emitting source. All proposed emissions sources will be equipped with baghouses, which should meet and surpass the limits of this rule.

- ***Rule 405: Solid Particulate Matter Weight***

  This rule limits the particulate matter emissions based on a mass per time rate. All proposed emissions sources will be equipped with baghouses, which should meet and surpass the limits of this rule.

- ***Rule 430: Breakdown Provisions***

  This rule requires timely notification be made to MDAQMD for unforeseen breakdowns in any permitted emissions source. CalPortland has operated in the MDAQMD for many years, is familiar with this rule, and will continue to comply following installation of the proposed Cardinal Scale Loadout.

4.4 Regulation IX – New Source Performance Standards

Regulation IX only includes the following rule:

- ***Rule 900: Standards of Performance For New Stationary Sources (NSPS)***

  The Federal NSPS requirements have been adopted by reference as Regulation IX. Specifically, 40 CFR 60, Subpart F – Standards of Performance for Portland Cement Plants applies to this Facility. This rule limits the allowable opacity from kilns and clinker coolers. It does not apply to the proposed Cardinal Scale Loadout.

4.5 Regulation X – Emission Standards for Additional Specific Air Contaminants

Regulation X only includes the following rule:

- ***Rule 1000: National Emission Standards for Hazardous Air Pollutants (NESHAP)***

  The Federal NESHAP requirements in 40 CFR 61 have been adopted by reference as Regulation X. However, none of the 40 CFR 61 Subparts apply to the proposed Cardinal Scale Loadout.

4.6 Regulation XI – Source Specific Regulations

None of the rules in Regulation XI apply to the proposed Cardinal Scale Loadout station.

4.7 Regulation XII – Federal Operating Permits

The rules in Regulation XII that may potentially apply to the Project are:

- ***Rule 1201: Definitions***

  The proposed Cardinal Scale Loadout meets the following definition of a Minor Permit Modification from this rule:

  A revision to a FOP which is not an Administrative Permit Amendment and meets all of the following criteria:

  (1) The proposed modification does not violate or cause a violation of any Applicable Requirement; and

  (2) The proposed modification does not relax any monitoring reporting or record keeping requirements; and

  (3) The proposed modification does not require or change a federally mandated case by-case determination of an emission limitation, or other standard, a facility specific determination of ambient impacts for temporary facilities, or a visibility or increment analysis or require or change a case-by-case determination of an emissions limitation or other standard required or imposed pursuant to District Regulation XIII – New Source Review; and

  (4) The proposed modification does not impose or change a permit condition which allows the facility, or any permit unit at the facility, to operate below the threshold of applicability for any Applicable Requirement or of this regulation; and

  (5) *The proposed modification is not a modification under Title I of the Federal Clean Air Act.*

- ***Rule 1205: Modifications of Federal Operating Permits***

  This Rule presents the requirements for obtaining a modification to an existing Federal Operating Permit, which is the next step of this Project. The proposed Cardinal Scale Loadout can be categorized as a Minor Permit Modification (see Rule 1201). Per this rule, the Minor Modification Application package will require the following components.

  I. *A description of the proposed change, the emissions resulting from the change, and any new Applicable Requirements which will apply if the change occurs; and*
  II. *Suggested language for the proposed change , including but not limited to terms and conditions necessary to regulate the proposed change; and*
  III. *Certification pursuant to the provisions of District Rule 1208 that the proposed change meets the criteria for a Minor Permit Modification; and*
  IV. *Completed forms to be used to notify USEPA and any Affected State(s) of the submission of an application for a Minor Permit Modification.*

- ***Rule 1207: Notice and Comment***

  This rule outlines the public notice and comment requirements for federal operating permits. However, according to Rule 1203, Minor Permit Modifications do not require public notice and comment.

- ***Rule 1208: Certification***

  This rule requires that all Federal Operating Permit applications include certification by a responsible official. The certification will be included with the Minor Permit Modification application package.

4.8 Regulation XIII – New Source Review

The rules in Regulation XIII that may potentially apply to the Project are:

- ***Rule 1303: Requirements***

  Part A of this rule requires Best Available Control Technology (BACT) for the proposed emissions sources. For the proposed emissions sources, the BACT standard is the use of baghouses that meet 0.005 grains/dscf at the discharge point. According to the manufacturers, the proposed baghouses meet this standard. This is consistent with the BACT standard recently identified for this Facility.

  The remaining portion of this rule requires offsets for emissions increases beyond designated thresholds. Because the proposed modification does not result in an emissions increase, these portions of Rule 1303 are not applicable.

- ***Rule 1310: Federal Major Facilities and Federal Major Modifications***

  The proposed Cardinal Scale Loadout station is a Minor Permit Modification, not a Major Permit Modification, so this rule does not apply.

- ***Rule 1320: New Source Review For Toxic Air Contaminants***

  The proposed Cardinal Scale Loadout is exempt from this rule.

4.9 Regulation XIV – Emission Reduction Credit Banking

Regulation XIV – Emission Reduction Credit Banking do not apply to this Project.

4.10 Regulation XV – Emissions Standards for Specific Toxic Air Contaminants

Regulation XV – Emissions Standards for Specific Toxic Air Contaminants does not apply to this Project.

4.11 Regulation XVI – Prevention of Significance Deterioration (PSD)

Regulation XVI only includes the following rule:

- ***Rule 1600: Prevention of Significant Deterioration (PSD)***

  This Rule incorporates by reference portions of federal rule 40 CFR 52.21. It requires that the following facilities obtain a PSD permit before beginning construction or modification: new Major PSD Facilities, facilities with Major PSD Modifications, and Major PSD Facilities that are requesting or modifying a Plant-wide Applicability Limitation. While this Facility meets the definition of a Major PSD Facility, it is certainly not a new Major PSD Facility. Furthermore, the proposed Cardinal Scale Loadout is not considered a Major PSD Modification because it does not result in an emissions increase. Therefore, this Project will not require a separate PSD permit.

5.0 PERMIT WORDING

The following permit wording, which has been primarily derived from the existing Federal Operating Permit, is proposed for the Cardinal Scale Loadout and associated control devices.

Baghouse 611BF041 (on Cement Silo #21)

1. The owner/operator shall install, operate, and maintain this equipment in strict accord with those recommendations of the manufacturer/supplier.
2. The owner/operator shall institute a program of maintenance which embraces at least weekly screenings of visible emissions, monthly visual inspections of all associated equipment (inclusive of the bags and their suspension systems) and regular (at least monthly, but to be determined with experience with this unit) measurements of the pressure differential across the bags.
3. The owner/operator shall log all the items in 2 above in addition to bag replacements, repairs and non-scheduled maintenance. The log shall be kept up-to-date and shall be maintained on-site for a minimum of 5 years and provided to the MDAQMD personnel upon request.
4. The owner/operator shall maintain an inventory of replacement bags on-site at all times which will ensure compliance with applicable Rules of District Regulation IV.
5. The owner/operator shall install and maintain a device which measures the pressure differential across the bags if one has not been provided with this unit.
6. This baghouse shall operate concurrently with the Cement Silo #21.
7. Particulate emissions from this baghouse shall not exceed a concentration of 0.005 grain/dscf. Source testing is not required to establish compliance with this limit. However, MDAQMD has the authority to require emissions testing at its discretion.

Baghouses 613BF301 & 613BF302 (on Truck Loading)

1. The owner/operator shall install, operate, and maintain this equipment in strict accord with those recommendations of the manufacturer/supplier.
2. The owner/operator shall institute a program of maintenance which embraces at least weekly screenings of visible emissions, monthly visual inspections of all associated equipment (inclusive of the bags and their suspension systems) and regular (at least monthly, but to be determined with experience with this unit) measurements of the pressure differential across the bags.
3. The owner/operator shall log all the items in 2 above in addition to bag replacements, repairs and non-scheduled maintenance. The log shall be kept current, on-site for a minimum of 5 years and provided to the MDAQMD personnel upon request.
4. The owner/operator shall maintain an inventory of replacement bags on-site at all times which will ensure compliance with applicable Rules of District Regulation IV.
5. The owner/operator shall install and maintain a device which measures the pressure differential across the bags if one has not been provided with this unit.
6. This baghouse shall operate concurrently with the proposed Cardinal Scale Loadout.
7. Particulate emissions from this baghouse shall not exceed a concentration of 0.005 grain/dscf. Source testing is not required to establish compliance with this limit. However, MDAQMD has the authority to require emissions testing at its discretion.

Cardinal Scale Loadout

1. The owner/operator shall install, operate and maintain this equipment in strict accord with those recommendations of the manufacturer/supplier.
2. The owner/operator shall not operate this equipment unless it is vented to properly functioning baghouses 613BF301 and 613BF302 under valid MDAQMD permit numbers.

APPLICATION FOR AUTHORITY TO CONSTRUCT AND PERMIT TO OPERATE

Page 1 of 2: please type or print

REMIT $269.00 WITH THIS DOCUMENT ($153.00 FOR CHANGE OF OWNER)

1. Permit To Be Issued To (company name to receive permit): CalPortland Company		1a. Federal Tax ID No.: 95-0597220
2. Mailing/Billing Address (for above company name): P.O. Box 146, Oro Grande, CA 92368		
3. Facility or Business License Name (for equipment location): CalPortland Oro Grande Facility		
4. Facility Address - Location of Equipment (if same as for company, enter "Same"): 19409 National Trails Highway, Oro Grande, CA 92368		Location UTM or Lat/Long:
5. Contact Name/Title: Desirea Haggard	Email Address: dhaggard@calportland.com	Phone/Fax Nos.: (760) 269-1135
6. Application is hereby made for Authority To Construct (ATC) and Permit To Operate (PTO) the following equipment: Install new Cardinal Truck Loading Station (3 pneumatic air slides, 2 load-out spouts). See attached application for details.		
Air Pollution Control Equipment, if any (note that most APCE require a separate application): 3 new baghouses will be installed. See attached application for details.		
7. Application is for: ☐ New Construction ☒ Modification* ☐ Change of Owner*		For modification or change of owner: *Current Permit Number: 223900003
8. Type of Organization (check one): ☐ Individual Owner ☐ Partnership ☒ Corporation ☐ Utility ☐ Local Agency ☐ State Agency ☐ Federal Agency		
9. General Nature of Business: cement manufacturing facility	Principal Product: cement	SIC Code (if known): 3241
10. Distances (feet and direction to closest): 265 Fenceline 620 Residence 2,255 Business 3,475 School		
11. Facility Annual Throughput by Quarters (percent): 25 % Jan-Mar 25 % Apr-Jun 25 % Jul-Sep 25 % Oct-Dec	12. Expected Facility Operating Hours: 24 Hrs/Day 6 Days/Wk 52 Wks/Yr 7,488 Total Hrs/Yr	
13. Do you claim Confidentiality of Data (if yes, state nature of data on reverse in Remarks)? ☐ Yes ☐ No		
14. Signature of Responsible Official: Richard P Walters Jr	Official Title: Plant Manager	
Typed or Printed Name of Responsible Official: Richard P. Walters Jr.	Phone Number: (760) 269-1183	Date Signed: 8/9/17

- For District Use Only -

Application Number:	*Invoice Number:*	*Permit Number:*	*Company/Facility Number:*
2176	45146	B012929	2239/00003

MOJAVE DESERT AIR QUALITY MANAGEMENT DISTRICT
GENERAL APPLICATION, continued

15. Stack Emissions Information:

Stack No.	Stack Height	Stack Diameter	Exhaust Temp	Exhaust Flow Rate	Exhaust Velocity
1	119'		Ambient	15,000 SCFM	
2	32'		Ambient	3,000 scfm	
3	36'		Ambient	3,000 scfm	

(list additional stacks on a separate sheet)

Stack Height is the distance above ground level to discharge point (feet)
Stack Diameter is the diameter (or equivalent circular diameter) of discharge point (nearest tenth foot)
If using cross-sectional area (A in square feet), equivalent diameter is D = (1.273A)^0.5
Exhaust Temp in degrees F, acutal or estimated to nearest 50 deg F
Exhaust Flow Rate at discharge point in actual cubic feet per minute (ACFM)
Exhaust Velocity in feet per second, design or measured

16. Remarks (basis for confidentiality of data, process description, modification description, etc.):

Please see attached permit application.

If you wish to specify process information as proprietary or confidential, space is provided for this purpose.
The kinds and rates of emissions may not be held confidential; emissions are subject to public disclosure.

REMIT $269.00 WITH THIS DOCUMENT ($153.00 FOR CHANGE OF OWNER)

Section 1: Facility/Owner Information

a. Permit To Be Issued To (Company Name): CalPortland Company		b. Federal Tax ID #: 95-0597220
c. Mailing/Billing Address (for above company name) P.O. Box 146, Oro Grande, CA 92368		
d. Facility or Business License Name (for equipment location): CalPortland Oro Grande Facility		
e. Facility Address - Location of Equipment (if same as for company, enter "Same"): 19409 National Trails Highway, Oro Grande, CA 92368		Facility UTM or Lat/Long: 34.608377, -117.335926
f. Contact Name/Title: Desirea Haggard	Email Address: dhaggard@calportland.com	Phone/Fax #.: (760) 269-1183
General Nature of Business: cement manufacturing facility		
Type of Organization (check one): ☐ Individual Owner ☐ Partnership ■ Corporation ☐ Utility ☐ Local Agency ☐ State Agency ☐ Federal Agency		

Section 2: Nature of Application

Application is hereby made for Authority To Construct (ATC) and Permit To Operate (PTO) the following equipment: One (1) new baghouse attached to existing Silo #21. See attached application package.	
Process Equipment Permit # served by proposed control:	
Existing Silo #21	
Application is for: ■ New Construction ☐ Modification ☐ Change of Owner	For modification or change of owner: 223900003 Current Permit Number
Do you claim Confidentiality of Data? X No ____ Yes (attach explanation; specify which information provided is confidential)	

Section 3: Equipment Information – complete section A-G as applicable, each control unit requires a separate application

A. Adsorption Units:

Flow diagram of emissions source and control unit: ☐ included		Manufacturer Specifications/Guarantee: ☐ included
Manufacturer:	Model:	Serial Number:
Adsorbent: ☐ Activated Charcoal: type____		☐ Other: specify____
Adsorbate(s):		
Number of beds:		Weight of absorbent per bed:
Dimensions of bed: thickness:____ surface area:____		
Inlet temperature: ____ °F		Pressure drop across unit: ____ inches H_2O
Regeneration: ☐ Replacement ☐ Steam ☐ Other, specify:____		
Regeneration Method: ☐ shut down ☐ alternate use, specify:____		☐ other, specify:____
Minimum Control efficiency: ____% ____ ppmv ____ mg/m^3		
Describe method to monitor control efficiency and breakthrough:		

B. Afterburner Units:

Flow diagram of emissions source and control unit: ☐ included		Manufacturer Specifications/Guarantee: ☐ included
Manufacturer:	Model:	Serial Number:
Combustion chamber dimensions: length:_____ in. Cross sectional area: _____sq. in.		
Fuel: ☐ natural gas ☐ propane ☐ CARB diesel ☐ other, specify_____		
Number and rating of burners:		Operating temperature of combustion chamber:
Inlet temperature: _____ °F		Pressure drop across unit: _____ inches H_2O
Gas flow rate: _____SCFM		
Catalyst used: ☐, please describe:		
Heat exchanger used: ☐, please describe:		
Minimum Control efficiency: _____% _____ ppmv _____mg/m^3		
Describe method to monitor control efficiency:		

C. Condenser Units:

Flow diagram of emissions source and control unit: ☐ included		Manufacturer Specifications/Guarantee: ☐ included
Manufacturer:	Model:	Serial Number:
Heat exchange area: _____ft^2		
Coolant flow rate: _____ gpm water air CARB diesel other, specify_____		
Gas flow rate:_____scfm	Coolant temperature: inlet _____ °F outlet _____ °F	Gas temperature: inlet _____ °F outlet _____ °F
Minimum Control efficiency: _____% _____ ppmv _____mg/m^3		
Describe method to monitor control efficiency:		

D. Electrostatic Precipitator Units:

Flow diagram of emissions source and control unit: ☐ included		Manufacturer Specifications/Guarantee: ☐ included
Manufacturer:	Model:	Serial Number:
Collecting electrode area: _____ft^2		
Gas flow rate:_____scfm		
Describe method to monitor control efficiency:		

E. Filter Units:

Flow diagram of emissions source and control unit: ■ included		Manufacturer Specifications/Guarantee: ■ included
Manufacturer: MikroPul	Model: 196(6)-12-20-TR-B	Serial Number: unknown
Filtering material: Polyester Felt with MikroTex finish to the outside		Filtering area: 3,763 square feet
Number and dimension of filters: 196 filters, each 6"x12', total area of 3,763 square feet		
Cleaning method: ☐ shaker ☐ reverse air ☐ pulse air ■ pulse jet ☐ Other, specify:_____		
Gas flow rate: 15,000 scfm		
Unit equipped with a manometer gauge? ■ yes ☐ no		Manufacturer's specified pressure differential range: _____ inches H_2O
Control efficiency: _____% _____ ppmv _____mg/m^3		=0.003 grains/dscf
Describe method to monitor control efficiency: Monitor gauge pressure differential.		

F. Scrubber Units:

Flow diagram of emissions source and control unit: ☐ included	Manufacturer Specifications/Guarantee: ☐ included	
Manufacturer:	Model:	Serial Number:
Type of scrubber: ☐ high energy, gas stream pressure drop:____ in. H_2O ☐ packed: packing type_____ packing size_____ packing material height_____ ☐ spray: number of nozzles_____ nozzle pressure_____PSIG ☐ Other, specify:_____		
Flow type: ☐ concurrent ☐ countercurrent ☐ crossflow		
Scrubber dimensions: length in direction of gas flow_____ in. cross sectional area_____ sq. in.		
Scrubbant:_____ Scrubbant flow rate: _____ scfm		
Control efficiency: _____% _____ ppmv _____mg/m^3		
Describe method to monitor control efficiency:		

G. Other types:

Equipment description:		
Flow diagram of emissions source and control unit: ☐ included	Manufacturer Specifications: ☐ included	
Manufacturer:	Model:	Serial Number:
Gas flow rate: _____ scfm		
Control efficiency: _____% _____ ppmv _____mg/m^3		
Describe method to monitor control efficiency:		

Section 4: Emissions Data

Emission Factor Basis (attach any source specified): ■ Manufacturer ☐ Source Test ☐ MDAQMD Default ☐ USEPA AP-42
☐ Other (please specify)_____

Pollutant	Pre-Control Max. Emissions	Units	Post Control Max. Emissions	Units
NOx				
NMHC				
SOx				
PM10			0.003	grains/ds
SOx				

Section 5 Exhaust Stack Information:

Stack height above grade: 119 ft.	■ vertical ☐ horizontal
Stack diameter:	
Exhaust gas temperature: Ambient °F w/ 150 F design max	Exhaust Flow Rate: 15,000 SCFM
Greatest height of nearby buildings:_____ ft.	

Section 6: Operation Information

Facility Annual Throughput by Quarters (percent): ☑ Uniform OR _____% Jan-Mar _____% Apr-Jun _____% Jul-Sep _____% Oct-Dec	Expected Hours of Operation: 24 Hrs/Day 6 Days/Wk 52 Wk/Yr 748 Total Annual Hours

Section 7: Receptor Information

Distance (Feet) and direction to the property line of closest: 620 Residence 2,255 Business 3,475 School
Name of Closest School (K-12) Riverside Preparatory School
If the proposed ICE operates within 1,000 feet of a school site and operation results in the emission of hazardous air pollutants, a public notice will be required at the expense of the applicant (CH&S §42301.6)

*Please note, District Staff may contact you for further information. Failure to provide additional information as requested in a timely manner may result in delays in the processing of this permit application.

APPLICATION FOR AUTHORITY TO CONSTRUCT AND PERMIT TO OPERATE

Page 1 of 2: please type or print

REMIT $269.00 WITH THIS DOCUMENT ($153.00 FOR CHANGE OF OWNER)

RECEIVED MDAQMD DEC 11 PM 12:19

1. Permit To Be Issued To (company name to receive permit): CalPortland Company
1a. Federal Tax ID No.: 95-0597220

2. Mailing/Billing Address (for above company name): P.O. Box 146, Oro Grande, CA 92368

3. Facility or Business License Name (for equipment location): CalPortland Oro Grande Facility

4. Facility Address - Location of Equipment (if same as for company, enter "Same"): 19409 National Trails Hwy, Oro Grande, CA 92368
Location UTM or Lat/Long:

5. Contact Name/Title: Desirea Haggard
Email Address: dhaggard@calportland.com
Phone/Fax Nos.: (760)269-1135

6. Application is hereby made for Authority To Construct (ATC) and Permit To Operate (PTO) the following equipment:

Air Pollution Control Equipment, if any (note that most APCE require a separate application):

7. Application is for:
[X] New Construction [X] Modification* [ ] Change of Owner*
For modification or change of owner:
*Current Permit Number: ~~B000161~~ B000101

8. Type of Organization (check one):
[ ] Individual Owner [ ] Partnership [X] Corporation [ ] Utility [ ] Local Agency [ ] State Agency [ ] Federal Agency

9. General Nature of Business: Cement manufacturing facility
Principal Product: Cement
SIC Code (if known): 3241

10. Distances (feet and direction to closest):
_____ Fenceline _____ Residence _____ Business _____ School

11. Facility Annual Throughput by Quarters (percent):
25 % Jan-Mar | 25 % Apr-Jun | 25 % Jul-Sep | 25 % Oct-Dec

12. Expected Facility Operating Hours:
_____ Hrs/Day _____ Days/Wk _____ Wks/Yr _____ Total Hrs/Yr

13. Do you claim Confidentiality of Data (if yes, state nature of data on reverse in Remarks)? [ ] Yes [ ] No

14. Signature of Responsible Official:
Official Title: Plant Manager

Typed or Printed Name of ~~Responsible~~ Official: Richard P. Walters Jr.
Phone Number: (760) 269-1183
Date Signed: 12/7/17

- For District Use Only -

Application Number:	*Invoice Number:*	*Permit Number:*	*Company/Facility Number:*
Paid PCR	45319/MD8352		2239/3

GENERAL APPLICATION, continued

15. Stack Emissions Information:

Stack No.	Stack Height	Stack Diameter	Exhaust Temp	Exhaust Flow Rate	Exhaust Velocity
1					
2					
3					

(list additional stacks on a separate sheet)

Stack Height is the distance above ground level to discharge point (feet)
Stack Diameter is the diameter (or equivalent circular diameter) of discharge point (nearest tenth foot)
If using cross-sectional area (A in square feet), equivalent diameter is D = (1.273A)^0.5
Exhaust Temp in degrees F, acutal or estimated to nearest 50 deg F
Exhaust Flow Rate at discharge point in actual cubic feet per minute (ACFM)
Exhaust Velocity in feet per second, design or measured

16. Remarks (basis for confidentiality of data, process description, modification description, etc.):

If you wish to specify process information as proprietary or confidential, space is provided for this purpose.
The kinds and rates of emissions may not be held confidential; emissions are subject to public disclosure.

SUBJECT: DCL Inc. Proposal no. 1705523

PROJECT: Cardinal Scale Upgrade

Jack,
Enclosed please find our equipment proposal and specifications in reference to your inquiry for silo fluidization, conveying and loading equipment based on handling aerated Portland cement with a bulk density of 65PCF @ 400TPH.

Estimated delivery schedule is (2-3) weeks for approval drawings with the equipment shipping (10-12) weeks after return of approval drawings. Customer has two weeks for review and return of approved drawings. Delays returning drawings may extend the shipping schedule. Delivery schedules are based at the time of quotation and may vary depending on when the order is placed.

Please feel free to contact me if you have any questions or further requirements regarding this proposal.

Sincerely,
Joe Left

DELIVERY TIME REQUIRED	APPROVAL DRAWINGS: 2-3 weeks	
	SHIPPMENT OF EQUIPMENT: 10-12 weeks after return of approval drawings.	
TERMS	Progressive, NET 35 DAYS	

Item 1 - DCL MODEL FBB-16 FLUIDIZED BIN BOTTOM
Qty. (1)

ESTIMATED NET WEIGHT: 16,000 lbs.

FLUIDIZED AREA: 16 ft. diameter / 201 square feet

DISCHARGE SIZE: 16 in. square, side

AIR CHAMBER CONSTRUCTION: Mild steel

MOUNTING FLANGE: 1/2 x 4 x 6 rolled angle

FLUIDIZATION MEDIA: Needled Polyester with carbon steel mesh

MEDIA SUPPORT: 1/8" x 1" bar grating, 1" centers

AERATION CONNECTION: (4) 3 in. flanged

BALANCE VALVES: (4) 3 in. manually operated butterfly valves to adjust flow to individual sections

AIR HEADER: 6" Sch. 40 pipe with (1) inlet and (4) outlets with hoses and clamps

AERATION REQUIREMENT: 1000 CFM @ 5 PSI

PAINT: Power tool cleaned, rust inhibitive primer and industrial enamel finish
Price for one (1) Fluidized Bin Bottom as described: [redacted]
Preferred Customer Price for one (1) Fluidized Bin Bottom as described: [redacted]

Item 1a-Positive Displacement Blower: To provide fluidization air to silo bin bottom. 1000 SCFM @ 5 PSI, 40 HP, 230/460 VAC / 3 PH / 60 HZ Premium Efficiency TEFC motor complete with elevated structural steel base, V-belt drive set and guard, inlet filter/silencer, discharge silencer with flex connector, pressure relief valve and gauge.
Price for one (1) Blower as described: [redacted]
Preferred Customer Price for one (1) Blower as described: [redacted]

Item 2 - DCL MODEL RTVA-16 ROTARY THROTTLE FLOW VALVE
Qty. (1)

WEIGHT: 460 lbs.

VALVE INLET/OUTLET: 16 in. square

MEDIA: 3/16 in. polyester

VALVE CONSTRUCTION: 3/16 in. thick mild steel

FLANGES: 1/4 in. thick mild steel

FACE TO FACE LENGTH: 26.88 in

BLADE MATERIAL (DRUM): 1/4 in. thick 200 BHN AR steel

BLADE OPERATOR: manual handwheel through a right angle gear box

BLADE SEALS: Polyester/neoprene laminate replaceable cartridge

AIR CHAMBER: To match fluidized conveyor

AIR INLET: (1) 2 in., NPT

BALANCE VALVE: Manually actuated balance valve, one (1) provided

PAINT: Power tool cleaned, rust inhibitive primer and industrial enamel finish
Price for one (1) Valve as described: [redacted]
Preferred Customer Price for one (1) Valve as described [redacted]

Item 3 - DCL MODEL RTVA-16 ROTARY THROTTLE FLOW VALVE
Qty. (3)

WEIGHT: 460 lbs.

VALVE INLET/OUTLET: 16 in. square

MEDIA: 3/16 in. polyester

VALVE CONSTRUCTION: 3/16 in. thick mild steel

FLANGES: 1/4 in. thick mild steel

FACE TO FACE LENGTH: 26.88 in

BLADE MATERIAL (DRUM): 1/4 in. thick 200 BHN AR steel

BLADE OPERATOR (OPEN/CLOSE/DRIBBLE): 5" diameter bore air cylinder solenoid positioning package inclusive of a two station manifold with two (2) 4-way, 2-position, spring return, solenoid operated valves pre-piped to a pilot operated check valve which is pre-piped to the cylinder. The pilot operated check valve provides positive and repeatable cylinder positioning. A junction box with position control module provide DCL prewire termination points for solenoids and three (3) reed limit switches provided. Solenoid package is rated for NEMA 4

BLADE SEALS: Polyester/neoprene laminate replaceable cartridge

AIR CHAMBER: To match fluidized conveyor

AIR INLET: (1) 2 in., NPT

BALANCE VALVE: Manually actuated balance valve, one (1) provided

PAINT: Power tool cleaned, rust inhibitive primer and industrial enamel finish
Price for three (3) Valves as described: [redacted]
Preferred Customer Price for three (3) Valves as described: [redacted]

BLADE OPERATOR: 5 in. diameter bore air cylinder with 4-Way, 2-Position single coil solenoid valve (fail closed under loss of electrical power), 120 Volt, 60 Hertz, NEMA 4
POSITION LIMIT SWITCHES: two (2) magnetic REED, full open/full close limit switches, 120 Volt, 60 Hertz, NEMA 4
Preferred Customer Price deduct per valve: [redacted]

Item 4 - DCL MODEL RTVA-16 ROTARY THROTTLE FLOW VALVE
Qty. (2)

WEIGHT: 460 lbs.

VALVE INLET/OUTLET: 16 in. square

MEDIA: 3/16 in. polyester

VALVE CONSTRUCTION: 3/16 in. thick mild steel

FLANGES: 1/4 in. thick mild steel

FACE TO FACE LENGTH: 26.88 in

BLADE MATERIAL (DRUM): 1/4 in. thick 200 BHN AR steel

LINERAR POSITIONABLE BLADE OPERATOR: 5" diameter bore air cylinder with double acting pneumatic linear actuator complete with linear transducer positioning package (gate positioned from customer supplied 4-20ma input signal), NEMA 4. Positioning package 4-20 ma output module, (gate sends a 4-20 ma feedback signal to customer controls). Package inclusive of a two station manifold with two (2) 4-way, 2-position, spring return, solenoid operated valves pre-piped to a pilot operated check valve which is pre-piped to the cylinder.

BLADE SEALS: Polyester/neoprene laminate replaceable cartridge

AIR CHAMBER: To match fluidized conveyor

AIR INLET: (1) 2 in., NPT

BALANCE VALVE: Manually actuated balance valve, one (1) provided

PAINT: Power tool cleaned, rust inhibitive primer and industrial enamel finish
Price for two (2) Valves as described: [redacted]
Preferred Customer Price for two (2) Valves as described: [redacted]

Item 5 - DCL MODEL FC16- FLUIDIZED CONVEYOR
Qty. (1)
FLUIDIZING AIR REQUIREMENT: 146 CFM
ANGLE OF DECLINATION: 8° degrees
OVERALL LENGTH: 5 ft. – 8 1/4 in.
STANDARD SECTION LENGTH: 10 ft.
WEIGHT PER FT: 44 lbs.
PRODUCT CHAMBER CONSTRUCTION: 11 ga. mild steel
AIR CHAMBER CONSTRUCTION: 11 ga. mild steel
FLANGES: 1/4 in. plate
MAXIMUM SPAN BETWEEN SUPPORTS: 20 ft.
FLUIDIZATION MEDIA: ¼ in. needled polyester
MEDIA SUPPORT: 1/8in. X 1in. bar grating, 1in. centers
PRODUCT INLET: (1)16 in. square, end
PRODUCT DISCHARGE: 16 in. square
TOP INSPECTION HATCHES: One (1) provided, gasketed quick release
BOTTOM INSPECTION HATCHES: One (1) provided, gasketed bolted
AIR INLET: (1) 2 in., Flanged
BALANCE VALVE: Manually actuated balance valve, one (1) provided for each air inlet
VENT CONNECTION: None
TURN BOX: Mild Steel with one inlet, and one outlet. Includes top and bottom inspection hatches; construction as described above and (1) 2" air inlet with manually actuated balance valve.
FINISH: Exterior Surfaces: power tool cleaned, rust inhibitive primer and industrial enamel finish. Interior Surfaces: power tool cleaned, rust inhibitive primer only
Price for one (1) fluidized conveyor as described: [redacted]
Preferred Customer Price for one (1) fluidized conveyor as described: [redacted]

Item 5a- Centrifugal Pressure Blower: To provide fluidization air to air slides 400 SCFM @ 29" w.g Fan SP @ 3500 RPM, 5 HP, 230/460 VAC / 3 PH / 60 Premium Efficiency motor complete with intake filter/silencer and rain hood.
Price for one (1) Aeration fan as described: [redacted]
Preferred Customer Price for one (1) Aeration fan as described: [redacted]

Item 6 - DCL MODEL FC16- FLUIDIZED CONVEYOR
Qty. (1)
FLUIDIZING AIR REQUIREMENT: 213 CFM
ANGLE OF DECLINATION: 8° degrees
OVERALL LENGTH: 13 ft. – 11 1/4 in.
STANDARD SECTION LENGTH: 10 ft.
WEIGHT PER FT: 44 lbs.
PRODUCT CHAMBER CONSTRUCTION: 11 ga. mild steel
AIR CHAMBER CONSTRUCTION: 11 ga. mild steel
FLANGES: 1/4 in. plate
MAXIMUM SPAN BETWEEN SUPPORTS: 20 ft.
FLUIDIZATION MEDIA: ¼ in. needled polyester
MEDIA SUPPORT: 1/8in. X 1in. bar grating, 1in. centers
PRODUCT INLET: (1)16 in. square, end
PRODUCT DISCHARGE: 16 in. square, end
TOP INSPECTION HATCHES: Two (2) provided, gasketed quick release
BOTTOM INSPECTION HATCHES: Two (2) provided, gasketed bolted
AIR INLET: (1) 3 in., Flanged
BALANCE VALVE: Manually actuated balance valve, one (1) provided for each air inlet
VENT CONNECTION: None
TURN BOX: Mild Steel with two inlets, and two outlets. Includes top and bottom inspection hatches; construction as described above and (1) 2" air inlet with manually actuated balance valve. Inlet from silo 22 will be provided with a caulked and bolted blank.
FINISH: Exterior Surfaces: power tool cleaned, rust inhibitive primer and industrial enamel finish. Interior Surfaces: power tool cleaned, rust inhibitive primer only
Price for one (1) fluidized conveyor as described: [redacted]
Preferred Customer Price for one (1) fluidized conveyor as described: [redacted]

Item 7 - DCL MODEL FC16- FLUIDIZED CONVEYOR
Qty. (1)
FLUIDIZING AIR REQUIREMENT: 400 CFM
ANGLE OF DECLINATION: 8° degrees
OVERALL LENGTH: 22 ft. – 9 1/4 in.
STANDARD SECTION LENGTH: 10 ft.
WEIGHT PER FT: 44 lbs.
PRODUCT CHAMBER CONSTRUCTION: 11 ga. mild steel
AIR CHAMBER CONSTRUCTION: 11 ga. mild steel
FLANGES: 1/4 in. plate
MAXIMUM SPAN BETWEEN SUPPORTS: 20 ft.
FLUIDIZATION MEDIA: ¼ in. needled polyester
MEDIA SUPPORT: 1/8in. X 1in. bar grating, 1in. centers
PRODUCT INLET: (1)16 in. square, end
PRODUCT DISCHARGE: 16 in., vent through drop box
TOP INSPECTION HATCHES: Two (2) provided, gasketed quick release
BOTTOM INSPECTION HATCHES: Two (2) provided, gasketed bolted
AIR INLET: (2) 3 in., Flanged
BALANCE VALVE: Manually actuated balance valve, one (1) provided for each air inlet
VENT CONNECTION: None
FINISH: Exterior Surfaces: power tool cleaned, rust inhibitive primer and industrial enamel finish. Interior Surfaces: power tool cleaned, rust inhibitive primer only
Price for one (1) fluidized conveyor as described: [redacted]
Preferred Customer Price for one (1) fluidized conveyor as described: [redacted]

Item 7a- Centrifugal Pressure Blower: To provide fluidization air to air slide 400 SCFM @ 29" w.g Fan SP @ 3500 RPM, 5 HP, 230/460 VAC / 3 PH / 60 Premium Efficiency motor complete with intake filter/silencer and rain hood.
Price for one (1) Aeration fan as described: [redacted]
Preferred Customer Price for one (1) Aeration fan as described [redacted]

Item 8 - DCL MODEL CFM-770 PULSE JET COMPACT FILTER MODULE
Qty. (2)
NET WEIGHT: 2,029 lbs. including fan
OVERALL HEIGHT: 54.5 in.
PRODUCT INLET: 24 in. dia. constructed of. 215/235 BHN AR Steel
CLOTH AREA: 770 square ft.
AIR WITHDRAWAL: 3000 CFM
AIR TO CLOTH RATIO: 3.8:1
FILTER ACCESS: Top removal design
FILTER MEDIA: (14) 8" dia. X 26" spun bonded polyester cartridges with hydrophobic/oliophobic finish
FILTER CLEANING SYSTEM: Pulse jet with pre-wired solenoid valves
PULSE TIMER: Solid state 0-30 second off delay adjustment, 50-500 milliseconds on time adjustment with minihelic pressure differential gauge face mounted in a NEMA 4 enclosure.
COMPRESSED AIR REQUIREMENT: 20 CFM @ 80 PSI
COLLECTOR HOUSING: Mild steel
CLEAN AIR PLENUM CONSTRUCTION: Mild steel
WITHDRAWAL FAN: 3000CFM @ 8" W.C. w/ 15 HP, Premium Efficiency motor, complete with flanged inlet, flanged outlet damper, drain weather cover, belt and shaft guards. Fan is provided with support and table for direct mounting (no connection ducting) to collector housing.
PAINT: Power tool cleaned, rust inhibitive primer and industrial enamel finish
Price for two (2) Compact Filter Modules with Fans as described: [redacted]
Preferred Customer Price for two (2) Compact Filter Modules with Fans as described: [redacted]

FILTER/REGULATOR: Provides excellent water removal efficiency and high flow pressure regulation. Includes, 40 micron filter, 0-125 psi range, metal bowl guard, and pressure indication gauge.
Preferred Customer Price: [redacted]
PULSE CONTROL: Dwyer DCT1000 Timer, Solid state 0-30 second cycle adjustment w/ Dwyer DCP100A pressure differential module in a NEMA 4X housing with view port.
Preferred Customer Price: [redacted]

REVISION SUMMARY

Revision	Date	Description
0	4/17/17	Original
1	5/2/17	Revised for increased airflow
2	7/18/17	Changed bags to 6" diameter and lengthened. Provided bin vent style

B STYLE BIN VENT OPERATION

In a typical application, dust-laden air is introduced into the bin vent from below. An optional induced draft (ID) fan draws air and light dust through the housing. Dust collects on the filter media and a dust cake builds. The filter media is sealed to the tubesheet, which separates the clean air plenum from the filter housing. The clean air exits the plenum. Periodically, or as pressure drop increases, the pulse jet cleaning system is activated. The pulse of clean and dry compressed air separates the dust cake from the filter media. The dust cake falls into the silo or bin below. The cleaning cycle reduces the pressure drop across the filters so that the fan can pull more dirty air into the bin vent. When the cleaning cycle fails to reduce the pressure drop, it is time to replace the filters.

Filters can be top removal (clean access) or side removal (dirty access). Top removal is more popular because bag changes are safer with limited dust exposure for the operator. Side removal is typically required on smaller units where standing on a small tubesheet can be unsafe. Other filter options have to do with the bag diameter and length. We recommend selecting a filter size that is common to your site so that stock filters and cages can be shared across baghouses. The operating temperature, air chemistry, and particle size will affect the type of fabric that we recommend. Other design parameters are considered to select the most effective equipment for your application.

DESIGN PARAMETERS

Destination	Oro Grande, California
Location	Outdoors
Construction	Dust Tight
Structural Design Conditions (Based on equipment installed at grade)	90 MPH Wind / 40 PSF Snow Load (IBC)
	Zone D Seismic (UBC)
Operation	Not specified
Process Design Temperature (°F)	150 max
Process Design Pressure (" wg)	± 20
Application or Dust Source	Truck unloading
Type of Dust	Cement
Dust Properties	Not specified
Particle Size (µm)	Not specified
Product Bulk Density (lb_m / ft^3)	Not specified, assume 80
K_{St} (bar · m / sec) / P_{max} (bar_g)[1]	Not explosive
NEC Area Classification (NFD)	General
Process Gas	Air
Design Air Flow (Actual ft^3 / min)	15,000
Dust Collector Model	196(6)-12-20-TR-B
Total Filtration Area (ft^2)	3,773
Design Air-to-Cloth Ratio (ft / min)	3.98
Interstitial[2] Velocity (ft / min)	299
Inlet Grain Load (grains / dry std ft^3)	Not specified, ≤ 5 assumed
Outlet Emission Limit (grains / dry std ft^3)	0.003
Input from Customer	Email

[2] Interstitial velocity is an important design parameter on hopper inlet dust collectors. It is the upward velocity of the air in the filter section.

EQUIPMENT DESCRIPTION

Each **MikroPulsaire®** dust collector will be furnished with standard construction as follows:

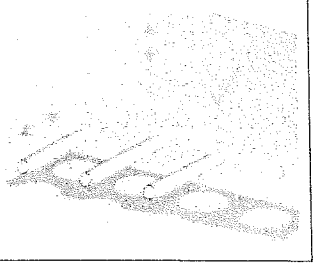
Model	196(6)-12-20-TR-B
Reference Drawing	BW7177
Bag and Cage Size	(196) 6" x 12' Nominal
Bag and Cage Material	• 16 oz / yd^2 Polyester Felt with MikroTex finish to the outside • Carbon steel cage
Bag and Cage Construction	• Double Beaded Snap Ring (DBSR) Cuff for top load design • Rolled-flanged cage top with integral 6" venturi • (12) vertical 1/8" nominal wires and horizontal rings on 8" centers
Clean Air Plenum	• Min 12 ga carbon steel construction • Removable roof panels providing bag access • Perimeter handrail on roof with 1 ½" square tube and toe plate • Exhaust flange orientation and size to be finalized at design approval stage
Tubesheet Assembly	• 7 ga carbon steel tubesheet stiffened to support live load of 40 lbs / ft^2 • Bolted between the plenum and housing sections
Housing	• Min 12 ga carbon steel with stiffeners • Bag grid • Bin mounting flange
Hopper	• N/A for bin vent
Support Structure	• N/A for bin vent
Access	• Raised header that places the compressed air header, pulse valves, and solenoid valves at the roof handrail • OSHA compliant ladder from bottom of mounting surface to service area • All ladders are equipped with a self-closing gate at the top

Painting

	Surface Prep	(Coats) Paint	Color
Collector Interior	None	None	-
Collector Exterior	SSPC SP-2	(1) Primer / (1) Top Coat	Azure Blue
Structure	SSPC SP-2	(1) Primer / (1) Top Coat	Azure Blue
Safety Equipment	SSPC SP-2	(1) Primer / (1) Top Coat	Yellow
Aux Equipment	Manufacturer's Standard		

MikroPulsaire® Cleaning Assembly

- Automatic self-cleaning system uses momentary bursts of compressed air through a specially designed venturi to provide efficient, thorough cleaning
- Carbon steel blowtubes, header, and enclosed solenoid valves pre-piped through nylon tubing to MikroPul right angle diaphragm valves rated for 0 to 185 F environment
- Removable blow tubes on TR and TRH models feature MikroFix tool-less coupling shown at right



Controller	• MikroPulse 100T 10-Position Continuous Timer control rated for 32 to 131 F environment					
Sensors	• Magnehelic gage					
Utilities	**Electrical**	hp	Voltage	Phase	Hertz	Notes
	Controller		120	1	60	NEMA 4 Enclosure
	Solenoids		120	1	60	NEMA 4 Enclosure
	Compressed Air 23 DSCFM at 80 PSI_g for 6 pulses per minute					
Equipment Exclusions	• Fan, to be mounted as base of dust collector • Material handling equipment, such as airlock or screw • Fire and explosion protection • Insulation – We must be notified if unit is to be insulated in the field • Motor starters and wiring • Duct including dirty air, filter-to-fan, and return air or stack • Air compressor and dryers					

EQUIPMENT PRICING	**Quantity**	**Unit Price**	**Total Price**
Model 196(6)-12-20-TR-B	1	[redacted]	[redacted]
DUCT PACKAGE			
• A duct package can be provided upon request			
SERVICES			
• Installation, Supervision, Commissioning, and Training are available			TBD
RECOMMENDED SPARE PARTS	Contact MikroPul Aftermarket at 800.892.7278 for spare parts		

Item 9 - DCL MODEL HPD2X2 DUAL AXIS, INTERNALLY VENTED, SPOUT POSITIONER
Qty. (2)
NET WEIGHT: 3180 lbs.

OVERALL HEIGHT: 27"

HORIZONTAL TRAVEL: 2' x 2'

DRIVE: Two (2) heavy duty 60:1 worm gear reducers with 1 HP, 1800 RPM, 230/460V, TEFC motors and two (2) torque limiting slip clutches for gear reducer protection in the event of an end limit travel overrun.

DRIVE LINKAGE: Chain and sprocket

EXTERNAL HOPPER CONSTRUCTION: Mild steel

INTERNAL HOPPER CONSTRUCTION: 200 BHN AR steel

HOPPER SUPPORT: Surface hardened cam rolls on structural steel rails

SEALS: High density felt on a 304 stainless steel sealing surface

TRAVEL LIMIT SWITCH KIT: NEMA 4 proximity limit switches for end of travel indication

RETURN TO CENTER SWITCH KIT: NEMA 4 proximity limit switches for return to center position.

PRE-WIRING: Electrical component and motor wires from both the positioner and spout are pre-wired to a numbered terminal strip inside a NEMA 4 junction box.

PAINT: Power tool cleaned, Solvent wash down, Primer: Sherwin Williams Kem flash Primer (grey) E61A45, manufacturers recommended mill thickness is (DFT 1.0-1.25)
Top Coat: Sherwin Williams Fast Production Enamel (ASA49 grey) F75, manufacturers recommended mill thickness is (DFT 1.0-1.5)

PACKAGING: Shipped completely assembled on skid
Price for two (2) Horizontal Positioners as described: [redacted]
Preferred Customer Price for two (2) Horizontal Positioners as described: [redacted]

Item 10 – DCL UNIVERSAL BULK LOADING SPOUT MODEL UN800EV-4
Qty. (1)
NET WEIGHT: 740 lbs.

RETRACTED HEIGHT: 44.5 in.

VERTICAL TRAVEL: 4 ft.

INLET: 32 in. constructed from 215/235 BHN AR Steel

DUST OUTLET CONNECTION: N/A with integral filter modules

RECOMMENDED AIR WITHDRAWAL: 1800 - 3000CFM

DRIVE: Heavy duty, worm gear 60:1 with a 1 HP, 1800 RPM, TEFC, 230/460V, 3PH, 60HZ brake motor

UPPER & LOWER DRIVE LIMITS: NEMA 4 full up and combination full down / slack cable lever limit switches

PRE-WIRING: Electrical components (except motor) are pre-wired to a numbered terminal strip inside a NEMA 4 junction box.

INNER CONES: Urethane with 1/8" x 1" nylon cone harness

OUTER SLEEVE: Hypalon/Nylon with Aluminum inner and outer Support Rings

DISCHARGE: Carbon steel tapered to fit 19-30" dia. hatches; with Urethane self-sealing cone and collapsible Hypalon/Nylon sleeve and aluminum support rings complete with air vibrator,(requires 25CFM @ 80PSI), and solenoid mounted and plumbed. NOTE: 12" of travel is required to fully separate the sealing cone assy. after initial contact with vehicle hatch. Self-sealing discharge option adds 23" to spouts retracted height. Note: hatches larger than 30" dia. will require an optional adapter plate.

PAINT: Power tool cleaned, solvent wipe down, rust inhibitive primer and industrial enamel finish

PACKAGING: Shipped completely assembled on skid
Price for two (2) Loading Spouts as described: [redacted]
Preferred Customer Price for two (2) Loading Spouts as described: [redacted]

AUTOMATIC LEVEL SENSE: pneumatic probe with controller mounted in NEMA 4 enclosure
Preferred Customer Price: [redacted]

Appendix B
Public Notice

Noticing Methods include the following, per District Rule 1302(D)(2)and(3):

- Published in newspapers of general circulation - *Riverside Press Enterprise* (Riverside County) and the *Daily Press* (San Bernardino County) on January 25, 2018.
- Mailed and/or emailed to MDAQMD contact list of persons requesting notice of actions (see the contact list following the Public Notice in this Appendix) on January 25, 2018.
- Posted on the MDAQMD Website at the following link: http://www.mdaqmd.ca.gov/permitting/public-notices-advisories/public-notices-permitting-regulated-industry

NOTICE of TITLE V PERMIT MODIFICATION

NOTICE IS HEREBY GIVEN THAT *CalPortland Company*, located within the Mojave Desert Air Quality Management District (MDAQMD) at 19409 National Trails Hwy, Oro Grande, has applied for a Preconstruction Review including Significant Modification of a Federal Operating Permit (FOP) pursuant to the provisions of MDAQMD Regulations XII and XIII, respectively. The applicant is a company engaged in Portland Cement Manufacturing. CalPortland operates under FOP Number 223900003 and is proposing modification to existing bulk cement truck loadout including addition of one new bulk truck loadout equipment.

REQUEST FOR COMMENTS: Interested persons are invited to submit written comments and/or other documents regarding the terms and conditions of the proposed Federal Operating Permit. If you submit written comments, you may also request a public hearing on the proposed Significant Modification of the FOP. To be considered, comments, documents and requests for public hearing must be submitted no later than 5:00 P.M. on February 24, 2018 to the MDAQMD, Attention: Chris Anderson at the address listed below.

RIGHT TO PETITION USEPA FOR RECONSIDERATION: The proposed Title V Permit is also subject to review and approval by USEPA. If USEPA has not objected to a proposed permit action and the District has not addressed a public comment in a satisfactory manner, the public may also petition the Administrator of USEPA at 1200 Pennsylvania Ave, N.W., Washington, D.C. 20460, within 60 days after the end of the 45-day USEPA review period, to reconsider the decision to not object to the permit action.

AVAILABILITY OF DOCUMENTS: The Proposed Federal Operating Permit as well as the application and other supporting documentation are available for review at the MDAQMD offices, 14306 Park Avenue, Victorville, CA 92392. Please contact Chris Anderson, Air Quality Engineer, at the above address or (760) 245-1661, x 1846 or at canderson@mdaqmd.ca.gov for additional questions pertaining to this action and/or corresponding documents.
